#### THE YEAR AT A GLANCE

The Department of Steel deals with the Steel Plants in the public and private sectors, rerolling industry and ferro-alloys including their future development, development of captive ore mines and coal washeries; production, distribution, prices, imports and exports of iron and steel and ferro-alloys; and planning, development and control of and assistance to all iron and steel industries

The office of Iron and Steel Controller, Calcutta, and the following public-sector undertakings function under the administrative control of this Department:

- (i) Hindustan Steel Limited, Ranchi, (Bihar);
- (iii) Bokaro Steel Limited, Bokaro Steel City, Bokaro (Bihar);
- (iii) Hindustan Steelworks Construction Ltd., Calcutta (West Bengal);
- (iv) Heavy Engineering Corporation Limited, Ranchi (Bihar);
- (v) Mining and Allied Machinery Corporation Limited, Durgapur (West Bengal);
- (vi) Triveni Structurals Limited, Naini, Allahabad (U.P.);
- (vii) Bharat Heavy Plate and Vessels Limited, Visakhapatnam (Andhra Pradesh);
- (viii) Tungabhadra Steel Products Limited, Tungabhadra Dam (Mysore); and
- (ix) Engineering Projects (India) Limited, New Delhi.

The total investment in these undertakings, as on March 31, 1971 was Rs. 1922 crores comprising Rs. 1098 crores as equity

7.49

capital and Rs. 824 crores as loans, and a condict for 41 per cent of the total investment of Rs. 4682 crores in Central Government undertakings other than departmental projects. This included an investment of Rs. 1635 crores on public sector steel plants, representing 35 per cent of the total investment in Central undertakings. Hindustan Steel Limited, with an investment of Rs. 1066 crores is the biggest company not only in the public sector but in the country as a whole and accounts for 23 per cent of the total investment in the public sector. The total number of compleyees in these undertakings is about 2 lakhs.

Some important data relating to these undertakings is given in the following table:

· · · · · · · · · · · · · · · · · · ·	Year of incorpo- ration	Capital expen- diture   upto 31-3-72	Equity Capital	Govern- ment loans as on 31-3-72	**Cumu- lative net prcfit (+)/ loss (—) }	Cumu- lative depre- ciation	Cumu- lative inter- est on Govt. loans	No. of Employ-

\*Value of work:

Some of the more important developments are given below:

## 1. Progress at Bokaro Steel Plant.

The work on the First Stage of Bokaro Steel Plant with a capacity of 1.7 million tonnes of steel ingots and 880,000 tonnes of pig iron progressed satisfactorily. Many of the units e.g., Cooling Pond No. 1, 1st 55 MW Turbines in the Thermal Power Station, one Sinter Band, Mechanised Iron Ore Handling and Blending System, Structural Shop, Oxygen Plant and Aceteylene Plant have already been commissioned. The first coke oven Battery was lighted on March 6, 1972 and the first blast furnace is expected to be commissioned within the next few months.

Government have taken a decision to launch a crash programme for achieving a capacity of 2.5 million tonnes of steel ingots in between the first (1.7 million tonnes) and second (4.00 million tonnes) stages at Bokaro Steel Plant. The work on the 2.5 million tonnes stage is expected to be completed by the end of the Fourth Five Year Plan period. The work on the Second Stage of Bokaro Steel Plant, has commenced and the possibility of further expansion is under examination.

The Government have acquired M|s. Asian Refractories Limited—a private sector Company which was under liquidation, and have nominated Bokaro Steel Limited to manage it on behalf of the Central Government. This Company will cater to the requirements of fire clay bricks of Bokaro Steel Plant during the construction operation stage.

## 2. Expansion of Bhilai Steel Plant.

At Bhilai Steel Plant the Sixth Blast Furnace and the Seventh Coke Oven Battery were commissioned in July 1971 and in January 1972 respectively.

The Plant is being expanded to about 4 million tonnes steel capacity. Action is in hand to develop the further supporting

facilities, including mechanisation of the captive Iron Ore Mines and the setting up of the Second Sintering Plant,

## 3. Expansion of Alloy Steels Plant, Durgapur.

To meet the increased domestic demand for tool, alloy and special steels, the Government have approved in principle, the expansion of Alloy Steels Plant, Durgapur, from the present capacity of 100,000 tonnes of ingots (60,000 tonnes finished steel) to 300,000 steel) to 300,000 tonnes of ingots (60,000 tonnes ingots (1,80,000 tonnes finished steel).

The Central Basic Steel The Central Engineering and Design Bureau of Hindustan Steel Limited have been entrusted with the work of preparing a detailed project report for this expansion.

## 4. New Steel Plants.

The preliminary work relating to the setting up of the setting up of the new Steel Plants has made Reports have been received satisfactory progress. Feasibility Reports have been received for the three new Steel Plants to be set up at Salem, Visakhapatnam and Vijayanagar.

As it takes 7 to 8 years to commission large integrated steelworks after the sites are selected, action has been initiated on inclusion location studies, for new projects to be considered for inclusion which in the Fifth and Sixth Plans, as well as on the expansions which may be possible at the existing locations.

S. Three-year Rolling Plan for spares, refractories and rolls. To ensure timely availability of stores and rous.

The ensure timely availability of stores and sparas, rolls, refractories etc. raw materials, refractories, etc., as also to derive the advantage indigenous of more economical procurement as well to facilitate indigenous production through bulking of the orders, a three-year rolling integrated plan for these items, has been formulated for the integrated steel plants in the country. Likewise a three-year maintenance sheel at three-year maintenance finalised. programme for the country. Likewise a three-year maintenan-and national result in a hosten has also been finalised These measures will result in a better and timely maintenance installed cancer towards between the contribute towards large self-sufficiency.

And utilisation of existing installed capacity, and will contribute

### 6. Central Research and Development Board.

In order to strengthen and coordinate research and development in steel manufacture and in associated 'input' industries, the question of constituting an autonomous Central Research and Development Board for the Iron and Steel Industry, is under active consideration. To overcome the present inadequacies of feedback of information in regard to developments in the iron and steel technology in India and abroad, the Board will also establish a Documentation and Information Centre.

## 7. Pilot Plants for Manufacturing Sponge Iron.

Having regard to the potential role of sponge iron in the future steel development programme, the Government have decided to set up a pilot plant at the National Metallurgical Laboratory, Jamshedpur, with a capacity to manufacture 20 to 25 tonnes of sponge iron per day with comprehensive facilities for for undertaking large scale tests. The plant will pre-reduce the iron ore with the help of non-coking coal or other fuels. The capital cost of the project is estimated to be Rs. 50 lakhs, which will 1. The Govwill be financed entirely by the Central Government. The Government Developernment have also cleared Andhra Pradesh Industrial Development ment Corporation's proposal for setting up a pilot plant with UNDP assistance for manufacturing sponge iron using locally available raw materials.

## 8. Holding Company for Steel.

A decision has been taken to set up a Holding Company steel for steel and associated input industries like coking coal, iron ore, many ore, manganese ore etc. The Holding Company will own all the shares: shares in public sector corporations dealing with these projects and only public sector corporations dealing with these projects and guide their work. It will also own all Government shares in the rol in the relevant joint sector companies and it is proposed that it should accompanies and it is proposed that it which nominee of public sector financial institutions which possess shares in private sector steel companies, mining companies shares in private sector steel companies or anicompanies, refractory units and smaller steel producing or ani-Bations.

The Holding Company will formulate long term programmes of development, arrange for effective channelling of surpluses into further expansion of the industry, finance necessary technological changes and innovations, and coordinate and supervise the operations of these companies in the connected sectors.

# 9. Equity participation in Mysore Iron and Steel Ltd.

The Central Government have increased its participation should be equity capital as about in the equity capital of Mysore Iron and Steel Limited from about 10 per cent to 40 per cent. The remaining shares are owned

## 10. Modification of Capital Structure of Bokaro Steel Ltd., and The Heavy Engineering Corporation.

The capital structures of Bokaro Steel Limited and of Heavy Engineering Corporation have been modified. In the case of Bokaro Steel Limited, the Authorised Capital has been raised from Rs. 500 crores to Rs. 600 crores and fully subscribed by converting loans amounting to Rs. 600 crores and fully subscribed the remaining Rs. 10 54 the remaining Rs. 10.54 crores by fresh contribution.

In the case of the Heavy Engineering Corporation, the Aurorised Capital of the Company Engineering Corporation, the Rs. 100 thorised Capital of the Heavy Engineering Corporation, the crores to Rs. 175 crores has been raised from Rs. 100 crores to Rs. 175 crores, and paid-up capital from Rs. 100 of Rs. 50.50 crores, and paid-up capital from Rs. of Rs. 50.50 crores, by conversion of loans to the extent

In pursuance of Government decision, separate Forces have been set up for each steel plant in the Public Sector as also for each of the Heavy Engineering Units under the admirances meet nistrative control of the Heavy Engineering Units under the accommendation of this Department. The Task Forces meet once in every 2 to 3 Department. The Task Forces more substantial and to identify the performance of the with a view concerned undertakings months to review the performance of the remedial magnitude with a view

The steel plants, both in public and private sectors as also the various engineering units are encouraged to use the good offices of the Department of Steel in resolving their problenis with the Department of Steel and other Government Departinents and for getting expeditiously indigenous clearance, foreign exchange allocations, import licences etc. These meetings have also proved very useful in resolving problems of supply of plant and equipment from the various engineering units to the Steel Plants and to each other,

## 12. Distribution Policy.

The distribution policy is being made more and more consumer-oriented, with the object of providing as much steel as possible to the actual consumers direct. The steel plants are now supplying over 90 per cent of production to actual consumer. mers. The system of distribution to small scale industries has also been modified. The small scale units are no longer required to send individual idents. The responsibility for bulk procurement of steel and its distribution between the small-scale units now devolves on the Small Scale Industries Corporations in the various States. This has obviated the need for depositing earnest money by the small scale units.

## 13. Billet Re-rollers Committee.

A Billet Re-rollers Committee has been set up to regulate the supply of billets and the materials re-rolled therefrom and their and their prices. Prior to this the distribution and prices of the products of the re-rollers were not regulated.

## 14. Regulation of distribution of used rails.

Used rails are one of the most important raw materials for scrap re-rollers. For the last two years these rails were not available to the scrap re-rollers. For the last two years these rails were not injunction. available to the re-roller because of a Court injunction. Prior to the Court because of a Court injunction. to the Court injunction these were sold by the Railways by auction. The injunction these were sold by the Railways by auction. The injunction has since been vacated. It has been

decided to distribute these used rails to the scrap re-rollers in a regulated manner and after allowing a conversion charge to distribute the re-rolled products therefrom also in a regulated manner. This will increase the availability of bars and rods substantially and will help the construction activity, particularly

15. Committee to allocate Steel for House Building. A Committee of Main Steel Prolucers has been tuted to coordinate and allocate steel materials for house building purposes in Dalla: ing purposes in Delhi. In making the allocations, the Committee gives preference to the commitment of tee gives preference to the small house builder whose requirement is less than 3 to the small house builder whose requirement is less than 3 to the small house builder whose requirement is less than 3 to the small house builder whose requirement is less than 3 to the small house builder whose requirement is less than 3 to the small house builder whose requirement at the small ho ment is less than 3 tonnes and whose plot area is less than 250 square yards. The possibility whose plot area is less than 250 other square yards. The possibility of extending this scheme to other

# 16. Curbing Malpractices in the use of Steel.

Additional steps have been taken to check possible malpractices in the use of steel. The Iron and Steel (Control) Order has been amended and utilisation of steel for purposes bas been about the bas been amended and utilisation of steel for purposes other than those for which it is allocated or applied, has been and Steel made a penal offence. Four regional offices of Iron and Steel Controller have been set up at Delhi, Calcutta, Bombay and Madric-use of ras and their functions, inter alia include detection of mis-use of Kanpur Action is in hand to set up two more offices at Kanpur

In December, 1971

Sel was increased by 50 percent Duty on all categories of indisteel was increased by 50 percent. Even so the prices of indicated steel. The Budget proposals contain further cost of imported steel. The Bodget proposals contain the landed cost of imported steed of the landed cost of imported steed of the landed cost of imported steed prices of the landed cost of the landed cost of imported steed prices of the landed cost of the lan of domestic steel are also generall.

Tanueu cost of mipo.

The ex-works prices domestic of domestic steel are also generally lower than the domestic

### 18. Steel Bank.

To eliminate the delays in the physical availability of some critical categories of steel, the Government have decided to set up a Steel Bank. The Bank will maintain stocks of various categories of steel to facilitate supply of materials to priority users ex-stock, and will thus reduce delays, now experienced in the availability of 'Matching Steel' to priority users and will serve as an insurance against costly delays. A small reserve of indigenously manufactured steel items is also being maintained by the Iron and Steel Controller. The Bank has since started functioning under the operational control of H.S.L. 19. Canalisation of Steel Imports.

The scope of the scheme of canalisation of imports, started in 1970-71, in pursuance of Government's policy to progressively nationalise the export-import trade has been further enlarged to cover all mild steel, high carbon and alloy steels, wire rode: rods in coils, all mild steel and high carbon steel semis, including ingots. ingots, blooms, slabs and billets, CRGO electrical steel sheets, all mild steel sheets, all mild steel sheets, all mild steel sheets, mild steel sheets, strips and skelp in coils; all other steel sheets, strips and skelp in coils; all other steel sheets, strips and skelp in cut lengths for manufacture of drums, barrels and start strips and skelp in cut lengths for manufacture of drums, barrels and steel furniture, tinplate for manufacture of open-top sanitary cans. In addition, ferro-alloys like ferro molybdenum, ferro-tungston, ferro-alloys like ferro molybdenum, ferrotungsten, ferro-vanadium, ferro-silicon have also been canalised.

## 20. Schemes for electric furnaces-cum-continuous casting units.

Government have approved 17 schemes for setting up electric furnaces-cum-continus casting complexes in the country.

These complexes in the country and These units will manufacture mild, high carbon alloy and spring starts finished products. spring steel billets which will be re-rolled into finished products.

The total The total capacity of these units when commissioned will be about 9 lakh tonnes.

Workers Representation on the HSL Board. Government have decided to appoint two representatives the Workof the Workers on the Board of Directors of Hindustan Steel 1 Steel\_2

Limited. The Workers' representatives on the Joint Wage Nego tiating Committee for the Steel Industry have been requested to send their suggestions for the implementation of this decision.

Having regard to its present capabilities and its emerging role in the context of future expansion of iron and steel industry, it has been decided that the Central Engineering and Design Rurans Design Bureau, established in 1959 under the Hindustan Steel Limited, should be converted into a separate company. Neces sary action to set up the new company is in hand.

# 22. Restriction on the import of Tool Alloy and Special Steels.

In view of the increased availability of tool and alloy steels the country and to a steel availability of tool and alloy steels. in the country and to ensure better utilization of the indigenous import capacity, further restrictions have been imposed on the import

#### FUNCTIONS AND ORGANISATIONAL SET UP OF THE DEPARTMENT OF STEEL

The Department of Steel which, consequent on the re-organization of certain Ministries in May, 1971, forms part of the Ministry of Steel and Mines, is responsible for the steel industry both in the public and the private sectors including re-rolling mills, alloy steel and ferro-alloys industry, setting up of additional Steel making capacities, implementation of the Iron and Steel (Control) Order, 1956, and formulation of policies in respect of the distribution and imports exports of iron and steel. Some of the Heavy Engineering units in the public sector, enumerated in Chapter 12, are also under the control of this Department.

The secretariat of the Department is headed by a Secretary. There are 5 posts of Joint Secretary, 2 posts of Director (incuding the post of Internal Financial Adviser), 4 posts of Deputy Secretary and 8 posts of Under Secretary. There are 3 posts of Project Officer—one for each of the three new steel Plants, viz., Salem, Visakhapatnam and Vijayanagar. In addition, there are two Advisory Wings. The Technical Wing comprises a Senior Industrial Adviser, 2 Industrial Advisers, 5 Development Officers and 6 Assistant Development Officers Who are who are posted in the Main Office, and 1 Industrial Adviser, 2 Development Officers who Development Officers and 2 Assistant Development Officers who are are posted in the Branch Office attached to the Office of the Iron and a Branch Office attached to the Office Wing Iron and Steel Controller at Calcutta. The Economic Wing comprises one Economic Adviser, three Assistant Economic Adviser, three Assistant Actist. Advisers, two Assistant Directors, one Analyst and one Artist. With the With the exception of two Assistant Economic Advisers and two Assistant Economic Advisers and two Assistant Economic Advisers and two Assistant Directors all other officers are in position. One Assistant Road of April, ant Economic Adviser is expected to join by the end of April, 1972

Attached and Subordinate Offices.

Office of the Iron and Steel Controller, Calcutta.—The Iron and Steel Controller implements the Iron and Steel (Control) Order, 1956, and formulates 'proposals for import/ export policies. As Chairman of the Joint Plant Committee, he supervised at he supervises the receipt and planned distribution of indents for supply of steel supply of steel to consumers. In this work, he is guided by the Steel Priority Consumers. the Steel Priority Committee, of which the Secretary of the Department is the Chairman. The Iron and Steel Controller publishes a Quarter Control of publishes a Quarterly bulletin namely "Iron and Steel Control" which contains inc. which contains information regarding production of iron and steel items and other regarding production of iron and consteel items and other matters of interest to the traders and con-

During the year, four Regional Offices under the Iron and Steel Controller have been set up at Calcutta, Madras, bay and New Delhi. Two more Regional Offices are established at Hyderabad and Kanpur. These are small offices functioning in an officer. functioning in an officer-oriented manner. Their main

- measures to apprections and take other necessary measures to ensure that the consumers who receive steel materials on a priority basis from Producers came.
- Works and Stockyards do not misutilise the same. adhere to the proceed roducers' Stockyards strictly adhere to the procedure laid down by the JPC for
- issue of steel materials from the Stockyards. To exercise a check over the registered billet rerollers to ensure that they follow the discipline laid down by the Billet Rerollers Committee with regard to the rolling programme and the allocations made
- allowed import of industrial units which allowed import of raw materials etc., as per essent tiality certificates issued by the Iron and

Controller, utilise them for the purpose for which they have been imported.

(v) To keep a watch over the market trends and open market prices of steel materials.

The inspections carried out and the vigilance exercised by these offices has already resulted in a decrease of abuses in the distribution and utilization of steel during the present period of scarcity.

### Hindi Cell

There is a Hindi Cell in the Department under the charge of a full-time Hindi Officer. The Department is continuing to make efforts to implement the policy of the Government in regard to progressive use of Hindi. An official Language Implementation Committee set up in the Department, reviews the progress in the use of Hindi for official purposes, in the Department and its attached/subordinate offices, and decides on the covernment. the measures to be taken to accelerate its use in Government. work.

## Special Cell

The Committee of Inquiry (Steel Transactions) headed by Shri A. K. Sarkar, former Chief Justice of India, submitted its report report on February 29, 1968. Government has accepted the recomment has accepted to take recommendations of the Committee and has decided to take department of the Committee and has decided to take departmental action against the persons who had been adversely comment has also ly commented upon by the Committee. Government has also decided at decided that investigation of the remaining cases relating to the issue of 1. This issue of large value licences permits should be continued. This work has a value licences permits should be continued. work has by and large been completed by the Special Cell created for the beautiful and the beautiful a ed for this purpose. The Cell is expected to be wound up by 30th April, 1972.

## PLANNING AND DEVELOPMENT

Over the last two decades the investment to augment the steel manufacturing capacity has been of a significant magnitude.

From a total imagnitude. From a total investment of Rs. 42 crores at the time of independence it has been of Rs. 42 crores at the time of independence it has been of Rs. 42 crores at the time of independence it has been of a significant independence. pendence, it has now reachted Rs. 42 crores at the time of has resulted:

This investment of Rs. 42 crores. This investment is steel. has resulted in a five fold increase in the production of steel from the time of independence and has created substantial employment opportunities in the country.

Significant as these achievements may appear to be the per pita annual consumption of steel is capita annual consumption of about 11 kilograms of steel is only one of the lowest in the world and the total production is only per cent of the world and the total production is only period, 1 per cent of the world and the total production is some European countries production. During the same period, some European countries and Japan have achieved a phenomenal growth in their steel making capacity. This indicates that we are far from the position which can be considered satisfactory.

Aictated The expected consumption which can be considered satisfaction the need to double our start atterns of the future have dictated the need to double our start atterns of the future have dictated the the need to double our steel manufacturing capacity during the

Persistent steel shortages in a growing economy would exert inflationary pressures. National security depends on an adequate steel supply of steel for armaments and other equipment. Steel capacity determines armaments and other equipment. Of consumer goods, employment of capital goods, production of consumer manufacture of capital goods, productant, the growth of the economic opportunities and most impor-

tant, the growth of the economy as a whole.

Efforts must, therefore, be directed towards resource mobilisation to utilise our large and good quality iron ore reserves.

The devertible last few years, we have the devertible last few years. Over the last few years, we have placed emphasis on the devernment of Indian equipment manufacture emphasis on the devernment manufacture. lopment of Indian equipment manufacturing capacity and technical skills. The result of these efforts with capacity and technical skills. nical skills. The result of these efforts will be reflected in the new steel plants which will have a sizeable indigenous content and considerable managements. will be established with a considerable indigenous content automotion of Indian effort.

A provision of Rs. 1053.32 crores was made in the Fourth Five Year Plan for the Steel Development Programme. In the Mid-Term Appraisal, the outlay was revised to Rs. 1050.45 crores. Of this, a sum of Rs. 351.13 crores was spent in the first two years of the Plan viz., 1969-70 and 1970-71. During 1971-72, the expenditure is estimated to be Rs. 180.63 crores. The expenditure planned for 1972-73 is Rs. 227.94 crores. The approved Fourth Plan outlay for each scheme, the actual expenditure in the first two years, the estimated expenditure during 1971-72 and the proposed outlay during 1972-73 are incorporated in the following statement:—

	8		(Rs. in cro	res)

For the Heavy Engineering Units under the Administrative control of this Department, a provision of Rs. 67.35 crores was made in the Fourth Plan. In the Mid-Term Appraisal the provision was reduced to Rs. 55.79 crores. Against this, in the first two years the expenditure incurred was Rs. 18.21 crores. In 1971-72 and 1972-73, the expenditure planned is Rs. 7.53 crores and Rs. 8.77 crores respectively. The schemewise details are given below:—

(Rs. in crores)

The long gestation periods involved in the development steel manufacturing capacity impel advanced thinking and planning for creation of new capacity. The first step in this direction is projection is projection. assess future required assess future required over a period of time. In order to assess future requirements, the National Council of Applied Formation Research nomic Research were commissioned to make a projection study of steel demand for of steel demand for various categories of steel during the period 1975-80. The study undertaken by the Council reflects 7.6 whereas in 1975 the estimated demand for steel would be million tonnes by 1992. million tonnes, by 1980 it would have increased to 12.9 million tonnes. It has been a twotonnes. It has been decided that while planning future steel manufacturing capacity. manufacturing capacity a provision of 1.8 million tonnes the steel for export by the end of the Fifth or the early years of the Sixth Plan should also Sixth Plan should also be made. This would also provide a cushion for any unexpected demands within the country.

The steel manufacturing capacity at the end of Fourth Plan period hopefully will be of the order of 12 million ingot tonnes. In the Fifth Plan period, this capacity will be further augmented, by expansion of the Bhilai Steel Plant and the Bokaro Steel Plant to about 4 million tonnes each and by establishing two new mild steel plants at Visakhapatnam and Vijayamagar. The implementation of these schemes by the end of the Fifth Plan period should create a capacity to manufacture approximately 19 million ingot tonnes of steel. To meet the growth in demand during the Sixth Plan period and thereafter, additional capacity would require to be created by expansion of existing plants or by establishing new plants at green field sites. The economics of the alternatives available are presently being studied. studied and preliminary work on location studies for new steel plants to be included in future plans has commenced.

## Alloy Steels

Till the beginning of the Fourth Plan, the production of alloy steels in the country was very limited and was confined to simpler grades of low value. With the setting up of the Allow C. grades of low value. Alloy Steels Plant at Durgapur with a production capacity of Steel response of finished steel, conversion of Mysore Iron and production Steel Limited into an alloy steels plant with a production capacity, of The into an alloy steels plant with a production capacity, of The into an alloy steels plant with a production capacity, of The into an alloy steels plant with a production capacity. Ugine Limited, a Company in the private sector, with a production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous alloy steel production capacity of 24,000 tonnes, the indigenous capacity capac duction capacity of 24,000 tonnes, the indigenous and 1968-60 capacity has been substantially augmented. In the year 1968-69, the indigenous production of alloy steels was about 200,000, the indigenous production of alloy steels; 200,000 tonnes. This included silico Manganese spring steels; spring steel. This included silico Manganese spring steels; spring steel containing vaanadium and other alloy elements, alloy construction. constructional steel; high speed steels, high carbon alloy tool and die steel; high speed steels, heat resisting steels; and die steels; high speed steels, high caroon tree cutting cutting cutting cutting steels; die blocks; stainless and heat resisting steel other than carbon steels; electrical steel sheets; high corbon steel other carbon steels; electrical steel sheets; high corbon steels. than carbon tool steel; other types of alloy and special steels.

In the sult tool steel; other types of alloy and special steels. has been a gradual in production There in 1971-72, it is likely to be years.

and

over 350,000 tonnes. Concomitant with the increase in production, the range of products has been diversified to include, construction steels, high carbon steels, free cutting steels etc. The alloy steel industry has now developed the potential to meet the bulk of the domestic demand.

In respect to the Alloy Steel Industry also, Government have formulated a long term development programme. The product-mix for the expansion of Alloy Steels Plant Durgaput and the new Steel Plant is under consideration keeping in view the likely demand for various categories in 1980. The Mysore Iron and Steel Limited are examining the feasibility of setting up a Forge Plant to produce high speed steel, tool steel, die block etc. The Government have sanctioned the setting up of Alloy Steels Plant in the private sector in Bihar with a capacity of 40,000 tonnes. The work on this Project has commenced. In addition, the simpler grades of special steels will be produced at various electric furnaces under installation.

In order to have the benefit of larger batch production and improved productivity, standardisation of more categories of alloy steels is being pursued. Connected with the production of alloy and special steels, is the question of utilisation of scrap. A working Group was constituted to study this matter and suggest measures for improving collection and availability of scrap. The Report of the Group has been received and is under examination.

Shortages of graphite electrodes in the short term have been overcome by imports. Steps are also being taken to develop indigenous manufacturing capacity for graphite electrodes commensurate with the growing requirements of this industry.

As a result of these measures, it is expected that the demand tial extent from indigenous production.

#### NEW STEEL PLANTS

Location of New Steel Plants

Plant at Salem in Tamil Nadu, and two integrated steel plants, near Hospet in Mysore and Visakha'patnam in Andhra Pradesh, was announced by the Prime Minister in the Lok Sabha on April 17, 1970. Following this decision, a number of Committees were constituted, for the selection of the project sites and for the identification of sources of raw materials for each of these projects. The Site Selection Committee, which included representatives of the concerned Central Ministries and Departments of the State Governments, and the two Consultants to Government, visited all the three regions in June and July, 1970.

On the recommendations of the Site Selection Committee, the 'project areas were provisionally demarcated in the last Project is about 14 km. west of Salem town, in the northern based. In the case of the project near Hospet in Mysore located at Tornagallu, midway between Hospet and Bellary. The Visakhapatnam Steel Plant, the site is at Balacheruvu, about 25 km. south of Visakhapatnam town, near the coast.

Appointment of Consultants

1971, for the preparation of Techno-Economic Feasibility of the Salem Special Steels Plant and the Visakhapatnam Steel

Plant was awarded to M/s. M. N. Dastur & Co. (P) Ltd. The Central Engineering and Design Bureau of Hindustan Steel Ltd! was commissioned for the preparation of the Report on the Vijayanagar Steel Plant.

#### Sources of Raw Materials

The Committees appointed by Government, for identifying the sources of raw materials for these new projects, have submitted their reports and have recommended the following linkages for the major items:-

	Visakhapatnam	Vijayanagar	Salcon
Iron Ore .	Bailadila	Bellary-Hospe	
Coking Coal .	Bengal-Bihar fields	Bengal-Bihar fields	Coke to te rur chased from mainsteel plants
Limestone			
(a) Steel Melting Grade	Bagalkot (Mysore)  pending furtherin- vestigation for high grade limestone in the vicinity of Visa- khapatnam	Bagalkot (Myso	ore)) Bagalkot (Myso <sup>re</sup>
(b) Blast Furnace Grade	Jaggayapeta (AP)	Bagalkot	Jaggayapeta (Al
Dolomite	Khammam (AP)	Bagalkot	Bagalkot furth pending furth investigation availability nearby area.

## Steering Committee for the New Steel Plants.

For reviewing, coordinating and keeping a close watch was set up on Martin these projects, a Steering Committee was set up on March 1, 1971, with the Secretary, Department

of Steel, as Chairman. The other members of this Committee are:-

- (i) Chairman, Hindustan Steel Ltd.
- Steel. (ii) Chairman and Managing Director, Bokaro Limited.
- (iii) Joint Secretary, Ministry of Finance (Steel Heavy Engineering Division).
- (iv) Joint Secretary, Department of Steel (New Steel Plants Division).

The Committee has upto end of March, 1972 held seven. meetings. The representatives of the Consultants and of the concerned State Governments are invited to participate in these discussions as necessary.

Product-Mix.

A Special Study Group was constituted by the Steering Committee at its meeting held on April 20, 1971, to advise Government of the control of the cont Government on the alternatives for the product-mix for each of these — the alternatives for the product-mix for each of these — the alternatives for the product demand of these new steel plants, keeping in view the expected demand. for steel, based on the forecast by the National Council of Applied B. On. Applied Economic Research for the period ending 1980. On considerations alternatives consideration of their recommendations, tentative alternatives for the for the product-mix were suggested to the Consultants for the three Plants.

Progress on Setting Up New Steel Plants.

Before receipt of the Feasibility Reports from the Consults, advance items of tants, advance action was initiated on preliminary items of Work. The progress thereon is indicated below:—

(i) Land Acquisition

Out of a total area of about 2,750 acres required for the Steel Division Salem Steel Plant, priority has been accorded for finalising the acquisition of a total area of about 2,750 acres required to acquisition of a total area of about 2,750 acres required to accorded for finalising the accordance of accordance of the acquisition of a composite block of approximately 1,372 acres. covering the main plant area. A sum of Rs. 40 lakhs has been placed at the disposal of the State. Government for payment of compensation during 1971-72. The balance of the land would be acquired in 1972-73.

In the case of the Vijayanagar Steel Plant, the plant area covering about 6,000 acres has been demarcated and, in the first instance, it is proposed to acquire about 4,500 acres. To meet the cost of land acquisition in 1971-72 an amount of Rs. 50 lakhs has been placed at the disposal of the State Govern-

In respect of the Visakhapatnam Steel Plant, the initial notifications have been issued by the State Government and further action to acquire the land will be taken during 1972-73.

### (ii) Preliminary Site Studies

Hindustan Steelworks Construction Limited were entrusted with the work of site investigations at all the three project sites. Soil tests, plate-bearing tests, etc., have been completed for the three sites.

In the case of Salem Steel Plant, HSCL have been commissioned for collection of iron ore samples from Kanjamalai after drilling deep bore holes. collected and despatched for tests. These samples have

HSCL have opened site offices at Salem, Visakhapatnam and Tornagallu (for the Vijayanagar Steel Plant). They are formulating their programme for commencement of preliminary work, e.g., temporary site offices, godowns, approach drainage system, site levelling, etc.

## (iii) Contour Mapping

The Survey of India have completed the topographical surveys of the three plant sites. Printed copies of contour maps prepared by them have been furnished to Consultants and HSCL for their use.

(iv) Exchange Yards, Sidings, etc.

Preliminary survey for the construction of exchange yards, sidings, etc., for the three new steel plants has been completed

## (v) Water Supply

The State Governments were requested to draw up water supply schemes to meet the requirements of water during the construction stage as well as for the operation stage of these projects and also for the townships. These schemes have been received and also for the townships. received from the State Governments and are being finalised on the hacia the basis of the comments given by the Central Water and Power Commission. It is 'proposed to have the water supply schemes executed by the State Governments concerned, with Central loan assistate of the State Covernments concerned water water supply the State Governments concerned with Central water loan assistance to the extent necessary and possible. charges, at agreed rates, would be paid to the State authorities for the supplies to the steel plants and townships.

## (vi) Testing of Raw Materials

Tests on iron ore samples are being conducted by the National Metallurgical Laboratory, Jamshedpur. Arrangements have also been made with Lurgis of West Germany for conducting bench scale tests on Kanjamalai iron ore, and for of pre-reduced suitability of Donimalai iron ore for production of pre-reduced pellets. A contract has been entered into with M/s. Tiajpromexport of USSR, for conducting tests for the production of super-fluxed pellets with Donimalai iron ore.

(vii) Economics of Using Imported Coking Coals.

The Consultants were asked to work out the economics low ask of Using Consultants were asked to work out the economical with indianate coking coals, which could be imported and blended with indigenous coking coals, which could be imported and be patham Steel Discoking coals for the Vijayanagar and Visakhana Steel Discoking coals for the Vijayanagar and Visakhana coking patnam Steel Plants. Their finding is that appreciable economies are not likely to accrue with the use of imported coking coals. Bharat Coking Coals Limited, are preparing a longterm programme for meeting the requirements of coking coals of these two steel plants.

(viii) Port facilities for the Visakhapatnam Steel Project-

M/s. Engineers India Limited have been commissioned for the preparation of a Feasibility Report for developing port facilities near Balacheruvu. On their advice, model ments are being conducted at the Central Water and Power Research Station, Poona. The results of these model are expected to be available by April, 1972. Thereafter, M/s-Engineers India Limited will finalise the Feasibility Report.

### (ix) Standardisation of Equipment.

A Panel of Experts was constituted in June, examine the possibility of standardising major items of plant and equipment for the new steel plants. The use of standar dised items of equipment will not only facilitate indigenous manufacture and commissioning of the equipment but also maintenance. With standardized spares, inventory holding can also be reduced.

The Panel has completed its work and suggested standarding sation of a number of items of plant and equipment. producing casting (for it is not plant and equipment those producing casting (for it is not plant and equipment and those producing casting (for it is not plant and equipment and those producing casting (for it is not plant and equipment eq producing castings/forgings were invited for discussions Ranchi on January 10, 1972, with a view to ascertain their production canceits. production capacity and maximisation of indigenous contribution for meeting the tion for meeting the requirements of plant and equipment for the new steel plants by coordinated and joint efforts of Indian manufacturers When manufacturers. While most of the larger and more items of plant and machinery will be manufactured Heavy Engineering Corporation, Ranchi, the capacity available with other leading with other leading machinery manufacturers, both in the public and private sectors and private sectors, is proposed to be utilised, for items which are either not with: are either not within the production line of HEC or for the which could be off-loaded by HEC. The response from

representatives of machinery manufacturers has been encouraging and a comprehensive survey is being made to plan the placement of orders.

## (x) Manpower Requirements

A study group was set up on December 27, 1971, for assessing the requirements of manpower during the construction stage as well as during the operation and maintenance stages of the three new steel plants. Their report is expected by the end of June, 1972.

Techno-Economic Feasibility Reports.

The Techno-Economic Feasibility Report in respect of the Salem Steel Plant was submitted by M/s. M. N. Dastur & Co. on December 10, 1971.

The Consultants have recommended that at Salem, stainless steel may be produced from pedigree scrap in electric funnamental the magnetite are furnaces. For production of other steels the magnetite ore from Kanjamalai would be concentrated, pelletised and smelted in Kanjamalai would be concentrated, pelletised and sinelted in electric pig iron furnaces. Small size coke (nut coke, peace) toke, pearl coke and coke breeze) to be obtained from the main steel plants would be used as reductant in the electric smelters. The hot metal thus obtained would be blown in basic oxygen convertors.

As the Salem project will be power intensive, the Government of Tamilnadu who were requested to consider a special tariff, have agreed to supply power at the rate of five paise

The CEDB submitted the techno-economic feasibility report Vijayana 1972. The on Vijayanagar Steel Plant at the end of January, 1972. The Myort on the Steel Plant at the end of January was submitted by report on the Visakhapatnam Steel Plant was submitted by Visakhapatnam Steel Plant of February, 1972. M/s. M. N. Dastur & Co. in the middle of February, 1972.

All the three Feasibility Reports are under examination.

#### Provision of Funds

In 1971-72, a provision of 3.5 crores was made for three new steel plants, the plant-wise break-up being follows:—

Salem Steel Plant	•		. Rs. 73 lakhs
Vijayanagar Steel Plant		•	. Rs. 138·5 lakhs.
Visakhapatnam Steel Plant			Do 128.5 lakhs.

As there was some delay in the receipt of the Feasibility Reports from the Consultants, the plant layout could not be finalised as anticipated in the case of the Visakhapatnam and Vijayanagar Steel Plants and the progress of expenditure has, therefore, been behind schedule. The expenditure on the three new steel plants during the current year is expected to be about Rs. 1.28 crores.

### Construction Schedule

According to the schedule of construction as indicated by the Consultants in the Feasibility Reports, the Salem Plant would be commissioned in seven years while the commissioning of the Vijayanagar and Visakhapatnam Steel Plants would take about eight years from now.

### PRODUCTION, PRICES AND DISTRIBUTION

Production.—Production of Steel in 1971-72 which was earlier expected to record a substantial improvement over that in 1970-71, was unfortunately affected by some mishaps and other reasons explained elsewhere in the Report. It is estimated to be about the same as in 1970-71, i.e., about 6 million tonnes of ingots—as per details indicated below:—

a % of rated capacity capacity capacity capacity capacity capacity s 57.6% 823 4 700 61.2% 3,477 5 85.8% 1,709 8 65.7% 617 6 64.300 6,300			1970-71		1971-72	.72

Details of year-wise production of steel ingots, saleable pig tron, saleable steel, tool, alloy and special steers, and finished steel are shown in Appendices I to VI.

Prices.—There was no general increase in Joint Plant Committee prices of pig iron and steel. However, on account of the increase in excise duty on different categories of steel on two occasions, viz., in December, 1971 and March 1972, the prices had to be revised upwards.

Open market prices were reported to be showing a downward trend till the end of 1971. With the hostilities in December, 1971 and consequent pressure on steel availability as well as restrictions in Railway movement, this trend was reversed in some cases in January 1972. However, since over 90 percent of the production of the main steel producers is being distributed direct to the actual consumes, the actual transactions at open market prices are comparatively small. The measures taken to prevent leakages from some of the so called actual users to the open market are described later in this chapter.

features of the new distribution procedure introduced from May 1970 were explained in some detail. Indentors have now become familiar with this procedure and it is working smoothly and without difficulty. The Iron and Steel Controller and the Ministry have been in constant touch with different classes of identors and some improvements have been incorporated in the procedure as a result of such contacts. The exemption limit, upto earnest money, has been substantially liberalised. This limit was three years plus 10 per cent thereof. The extra margin of 10 teations had been received that the earnest money paid was locked up till the entere despatches were completed. Arrangements

were accordingly made for the retund of the earnest money in instalments with progressive despatches. In the matter of processing of indents in the office of the Joint Plant Committee also, the procedure has been simplified and streamlined. Scrutiny and check are now being exercised with specific reference to a few prescribed check points only and a definite time limit has been prescribed by which the indents have to be processed and finalised by the Joint Plant Committee. Similarly, a time limit has also been fixed for the issue of sale orders by the producers. An Appraisal Cell has been set up in the Office of the Iron and Steel Controller, among other things, to ensure that these time limits are observed in practice.

In February 1971, Government's Resolution of May, 1970 explaining the new procedure was quashed by a judgement the Allahabad Tri the Allahabad High Court, primarily on the ground that the Accordingly at the announced in the form of a Resolution Accordingly, the Iron and Steel (Control) Order was suitably amended in Manual Steel (Control) Order was suitably amended in March, 1971 and revised Notifications explaining the distribution and the distribution procedure were issued under the revised Iron the Steel (Control) Order. In revising the Control Order, opportunity was taken to effect a few other modifications which were considered noted. were considered necessary. One of the important modifications makes the use of steel and one of the important modifications makes the use of steel for any purpose other than that for which it is applied for or ellers and purpose other than that for which it is applied for or allotted a violation of the Control Order Act. In March 1972 ander the Essential Commodities In March 1972 a slight further modification has been made authorising suspension of supplies of iron and steel from stock yards etc. to partice yards etc., to parties against whom there is reason to believe that they have migrative that they have misutilised steel material allocated to them.

A Billet Rerollers Committee was set up in April 1971 to regulate the distribution of billets to the Billet Rerollers and to regulate the distribution of the rerolled products. Previously, while billets were supplied to the Billet Rerollers at JPC prices there was no regulation on the price or distribution of the rerolled products. The price and distribution is now regulated

by the B.R.C., which allows a reasonable conversion charge to the rerollers. The prices fixed by the Billet Rerollers Committee are subject to Government's approval. In addition to the indigenous availability of billets, additional quantities of billets are also being imported and distributed along with the indigenous billets at a pooled price by the B.R.C.

The Qureshi Committee constituted to review the question of allocations to be made to the trade and other allied matters subtrade, their main recommendation was that the present system to be earmarked for release to trade, from time to time, may continue. As regards the liquidation of the huge backlog of that, to offer an incentive for conversion of those orders to new rately for new and old orders and facilities may be given to traders to book new orders for reduced quantities, without payment of these recommendations have been accepted and are being implemented

With regard to supply of Steel to Small Scale Industries, Government have accepted the recommendation of the Balachandran Committee set up by the Ministry of Industrial Development, to channel all supplies through the State Small Scale Industries Corporations. This recommendation is being implemented, though direct allocations and supplies to units in some areas and sectors are being continued to avoid dislocations during the transitional period.

The main functions of the Regional Offices of the Iron and of 1971) are given in the Chapter 'Functions and Organisational Off The Department Of Steel'.

In all, there are 32 stockyards of the Main Producers. The Regional Officers have already inspected 21 stockyards of which 5 have been inspected more than once. The irregularities noticed in the stockyards operations have been brought to the notice of the Main Producers. The Main Producers have taken appropriate corrective steps in respect of the defects and irregularities brought out by such inspections. These checks on the working of the stockyards have contributed towards improvement in their functioning to a large extent.

The Regional Controllers and the inspecting staff have so far checked 209 scrap rerollers, 24 billet rerollers and 135 other units (including actual consumers). A number of scrap rerolling units were found to be closed. A few of them were nonexistent. Allocations of raw material have been suspended in respect of about 40 such units. Show-cause notices have been issued to some others. With regard to billet rerollers also, show cause notices have been issued for not adhering to the rolling programme and scheduled supply of material to the allottees of the Billet Rerollers Committee. Billet supplies have been suspended in the case of two Rerollers.

As a result of preliminary probes, 23 cases have been forwarded to the C.B.I. for further investigation. These cases mostly relate to the use of forged essentiality certificates and misuse of materials received for fabrication.

A large number of complaints used to be received they house builders, particularly in Delhi, about the difficulties they had to undergo, not only because of the inadequacy of allocations but also because of the procedural formalities had to observe. This was discussed at a high level with representatives of the main steel producers and, as a result, a new scheme was introduced in Delhi for house-builders with effect from the 1st October, 1971. According to this scheme, an applicant can submit his application to the office of any of the three main steel producers in Delhi, and all such applications

would be considered jointly by a Committee of the main producers who would make allocations in a co-ordinated manner, after pooling the availability in the stockyards of all the three main producers. The procedure was also simplified and streamlined to reduce inconvenience to the indentors. A special provision was made that applications from the small-house builders—i.e., those whose requirement is less than 3 tonnes and whose plot area does not exceed 250 sq yds., would be given preference. This scheme has worked fairly satisfactorily as the number of complaints has since decreased considerably. The question of extending the scheme to other Metropolitan Areas is under consideration.

Another idifficulty, about which frequent representations used to be received, was in respect of "matching steel". In quantities of specific categories of steel, several units which had been able to get substantial quantities of other categories were of such cases as far as possible, two measures have been introduced. While making the quarterly allocations the Steel Priosories of steel to be held by some of the principal stockyards Sieel Controller to those units who require "matching steel" in quantities

A similar measure to assist in the availability of critical Bank, which is described in the Chapter under Imports.

continue to be received. As a stockyard should have a minimum for the Producers to agree in all such cases. It is only when the also goels up that it would be possible to increase the number of stockyards to any substantial extent. However, during the

year, HSL have opened four more stockyards at Kota (Rajasthan), Allahabad (U.P.), Coimbatore (Tamil Nadu) and Srinagar (J. & K). Preparations are under way to open a stockyard at Bhilai (Madhya Pradesh).

The various measures for streamlining the distribution system, along with a fairly liberal import policy in respect of items in short-supply, coupled with a regulatory policy in respect of exports, contributed to a large extent in bridging the gap between a large extent in bridging the gap ween supply and demand. At the time of the hostilities, several measures had to be taken to meet the emergency. Over riding priority in movement of steel was given, whether against demands already given List 'A' priority or against special requests from defence authorities and fabricators executing defence orders. Similar advice was given to the stockyards also. special Defence Co-ordination Committee was set up in Office of the Iron & Steel Controller which during the hostilities met thrice a week. Where necessary, the main producers were advised to revise the rolling programme to meet some urgent defence demands. Special stocks of adequate quantities important categories of steel were moved to stockyards at certain strategic points, to meet the urgent requirements of local defence formations. The Regional Iron and Steel Controllers were instructed to assist the local defence formations in obtaining their versus ing their urgent requirements from other sources as well by exercising the powers under the Iron and Steel (Control) Order. While the above measures were necessary in the national interest and had to be interest. for the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the other consumer were necessary in the manifold of the oth for the other consumers to some extent.

### IMPORTS AND EXPORTS OF IRON AND STEEL Imports

The year 1971-72 witnessed a further increase in the demand for steel and its products. To keep pace with the rising demand demand, and the shortfall in indigenous production, Government and the shortfall in indigenous products. ment arranged bulk imports through HSL and MMTC, for small scale in a scale i scale industries, export oriented engineering industries, and for other actually export oriented engineering industries, barother actual users. Imports of steel sheets, plates, drums, barrels and steel for furniture industries, and tinplate for manufacture of the formula of the form facture of Open Top Sanitary Cans, were also arranged through

In the wake of the mishap at Rourkela Steel Plant, HSL imported Tinplate/H.R. coils for conversion to Tinplate at Rourkela like ship Rourkela, and sizeable quantities of steel materials like ship building control of the plates, H.R. building quality plates, boiler quality plates, Tested plates, H.R. coils for the coil Coils for tube making, H.R. sheets and C.R. sheets. Against Public Notice making, H.R. sheets and C.R. sheets. Public Notice 140, HSL imported one lakh tonnes of billets.

Importe 140, HSL imported one lakh tonnes of billets. Imports under Public Notice 140 relating to all permissible categories. Public Notice 140 relating to all excluding staincategories of mild steel and high carbon steel excluding stainless, tool and alloy steels also materialized to a large extent during 1971-72.

MMTC imported 3,600 tonnes of stainless steel sheets/ strips, plates, and 40,000 M/T. of M.S. plates during the current hand 550 M/T of steel year, plates, and 40,000 M/T. of M.S. plates during the billets of which have also placed orders for 64,550 M/T of steel billets of which 22,500 tonnes have arrived and the balance is expected by May 1972. In addition, orders have been placed to 20,000 are being finalized for 20,000 May 1972. In addition, orders have been for import of billets and negotiations are being finalized for import of another 17,000 tonnes of billets.

The imported materials substantially helped the industries watch is being get over the shortages of steel. A close watch is being shortages of steel. A close watch industrial maintained on the indigenous availability to ensure that industrial do this basic raw material. activities do not suffer for want of this basic raw material.

Whenever circumstances warrant, within the constraint of foreign exchange availability, imports are allowed even on an ad hoc basis to sustain industrial activity in the country.

To protect the interests of indigenous alloy, special and tool steel producers who have sizeable inventories of stocks but have suffered from lack of orders, import policy for alloy and special steels has been made restrictive.

This year also the admissibility for import of steel items, has been confined to items which are not produced in the country or where the quantities and qualities produced are inadequate to meet the indigenous requirements. In framing the import policy, efforts are made to ensure that whereas industries do not suffer for want of essential raw material like steel and ferro-alloys, the producers of steel including secondary producers and re-rollers do not suffer from want of adequate orders.

A significant development in the field of import during this period has been the scheme of canalisation. Consistent with Government's policy to progressively nationalist the export and import trade, and to streamline the availability of steel to various consuming sectors, the import of various items of steel has been canalised through specialised agencies mainly HSL and MMTC. The present scheme of canalisation which was started in 1970-71 was initially restricted ferro-alloys and three categories of steel. In 1971-72, its scope was enlarged to cover items like:

- (i) ferro-molybdenum;
- (ii) ferro-tungsten;
- (iii) ferro-vanadium;
- (iv) ferro-silicon;
- (v) All mild steel high carbon and alloy steel (other than stainless steel) wire rods in coils;
- (vi) All mild steel and high carbon steel semis including ingots, blooms, slabs, and billets;

- (vii) Stainless steel sheets, plates and strips cut length or in coils:
- (viii) Cold rolled grain oriented electrical steel sheets;
- (ix) All Mildsteel sheets, strips and skelp in cut length or in coils both hot and cold rolled;
- iron ore and pellets for electric arc furnaces;

As the completion of some of the projects in the past had been delayed, partly on account of non-availability in time of steel of the required specifications, Government have decided levels of stocks of specified critical categories of steel so that HSL has been nominated to operate the Bank on behalf of Government.

To watch the utilisation of import licences issued for Iron and Steel items, a Public Notice was issued on the 7th October, 1971 directing the project authorities, actual users and exporters have porters holding import licences for Iron and Steel Items (including those in Pagistered exporting those issued under the Import Policy for Registered exporters as well as combined import licences issued in favour of beneficial beneficial combined import licences issued in favour of the beneficial combined import licences issued in favour of the beneficial combined import licences issued in favour of the combined import licences is the combined import licence in t IDA beneficiary industries) to send monthly returns regarding placement of orders, actual shipment etc. Import licences to those parties w.e.f. 1st April 1970 were issued subject to the condition that such licence holders shall submit the return as prescribed in this Public Notice. It was specifically mentioned that the defent has public Notice. that the defaulters in this regard would be deemed to have contravened the provision of I.T.C. order 1955 and would be liable to non-revalidation of existing licences and also non-issue of time licences and also non-issue of time licences. further licences. These steps should help in keeping an effective watch on These steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the steps should help in keeping an effective watch on the step should help in keeping an effective watch on the step should help in keeping an effective watch on the step should help in keeping an effective watch on the step should help in keeping and the step should help shou tive watch over the demand for and availability of iron and items. steel watch over the demand for and availability of months and the actual arrival of imports into the country.

terro-alloys in 1968-69, 1969-70, 1970-71 and during April1971 is given at Appendix VII.

#### **EXPORTS**

During the financial year 1971-72, export policy continued to be regulatory in view of the shortage experienced in the country. Only limited exports were permitted so as to make more steel available for meeting the internal growing demand of Engineering and other industries. However, an effort was make to fulfil the past commitments and maintain foreign markets with a view to stabilising trade relations with friendly countries. Special consideration in the allocation of steel is given in cases sponsored by the Engineering Export Promotion Council and similar agencies where the steel is required for the manufacture of goods for export.

### Iron and Steel-

The export earnings during 1970-71 from export of iron and steel were Rs. 66.92 crores and for the period April, 71—February, 72, these were of the order of Rs. 24.13 crores. HSL being the largest producer of steel in the country, exported material of the value of Rs. 21.02 crores during April, 71—February '72.

The prinicpal items exported during the current financial year are basic grade pig iron, bars and rods, rails and structurals. During 1971-72 exports were made to 17 countries, namely: Argentina, Burma, Hong Kong, Indonesia, Iran, Iraq, Japan, Kenya, Kuwait, Muscat, Singapore, South Korea, Sudan, U.A.R., U.S.A. U.S.S.R, Yugoslavia

The following table incorporates the export of iron and steel during 1970-71 and 1971-72 (April—February 1972)

1969-70	Quantity	Approxiue mate value crores)
1970-71	(Tonnes)	(Rs. Cr
	13,48,563	75.71
<sup>1971-72</sup> (upto Fel.	9,98,039	60 /
(upto February '72)	3,93,005	24 <sup>·13</sup>

Statements showing categorywise exports of Iron and Steel during 1970-71 and 1971-72 (April—February 1972) and countrywise/categorywise exports of Iron and Steel during the 11 months period ended February, 1972 are at Appendices VIII and IX.

### Scrap

The export of ferrous scrap is canalised through the Metal Scrap Trade Corporation Limited, Calcutta. With the increase in demand in the home market, Government have imposed greater restrictions in the export of those varieties which can be consumed in domestic industries. As a result, the export of ferrous scrap has been going down. During the years 1969-70, 1970-71 and 1971-72, the following quantities of scrap were exported:

						Quantity	Approxi- mate value
						(Tonnes)	(Rs. crores)
<sup>1</sup> 969-70							8•94
	•	•	•	•	•	4,20,374	
<sup>1970-71</sup>	•	•				2,60,905	6 95
<sup>1971</sup> -72 (upt	o Sep	temb	er '71)			82,374	I 2I

A statement showing the export of iron and steel scrap be seen at Appendix X.

## $\mathbf{F_{erro-Alloys}}$

The export of ferro-alloys has been put in three broad cate-and others. While the export of Ferro Manganese is canalised MMTC, the export of other Ferro-alloys is permitted

on a restricted basis. The export of Ferro-alloys during the last three years is given below:—

							Approxi- mate value (Rs. crores)
1969-70	•	•	•			1,26,978	9·67
1970-71			•	•	٠	98,617	11 39 2 28
1971-72 (up	oto Sel	otemb	er '71)			17,504	

A statement showing categorywise exports of Ferro-alloys during 1971-72 (April to September, 1971) is given at Appendix XI.

### HINDUSTAN STEEL LIMITED

### Investment

The authorised capital of Hindustan Steel Limited is Rs. 600 crores. On 31st March 1971, the paid up capital was loans to HSL from time to time and these amounted to investment of Government funds in HSL as on 31st March 1971 was Rs. 1025.98 crores.

To enable the Company to finance capital expenditure on new schemes and on township expansion, equity participation of 72. In addition, in pursuance of the Government's decision that capital expenditure on townships should be met out of equity and that the capital structure of public enterprises should be recast on this basis, loans amounting to Rs. 32.3 crores have Thus, at the end of 1971-72, the paid-up capital of the Company an amount of Rs. 21.60 crores as equity during 1972-73 for expansion of townships

No long-term loans have been advanced to the Company Company, on the other hand, has repaid Rs. 85.49 crores of crores is expected during 1972-73.

Lowest been

A short-term loan of Rs. 17 crores has, however, been requirements. Company during 1971-72 to meet its cash

#### Production

The following table indicates the production in the various units of the Company during the years 1970-71 and 1971-72 (provisional):—

(in '000 tonnes). Saleable Unit Ingots Bhilai Steel Plant: 1970-71 1,568.1 1,940 1971-72 1,953.7 Rourkela Steel Plant: 1970-71 597.5 1971-72 1,038 822.7 Durgapur Steel Plant: 1970-71 413 432.1 1971-72 634 699 •8 TOTAL: 1970-71 2,646 2,597.7 3,612 1971-72 Alloy Steels Plant: 3,476.2 1970-71 1971-72 Fertilizer Plant, Rourkela 56· I Calcium Ammonium 1970-71 Nitrate (25% N2) 1971-72 94.2 [N.B. Data for 1971-72 are provisional] 185.4

According to the original programme formulated by HSL, a production of 4.75 million tonnes of ingots and 3.59 million tonnes of saleable steel was expected from the three integrated steel plants. Unfortunately, these expectations have not materialised. It should, however, be stated that the production of 1.954 million tonnes of ingots at Bhilai is the highest in that plant so far and is 14,000 tonnes more than last year's production while the production at Durgapur has exceeded last year's production by 66,000 tonnes of ingots.

The following were the main factors responsible for the shortfall in production this year as compared to the targets:

A major break-down in some of the Coke Oven Batteries in the Bhilai Steel Plant in May, 1971 resulted in shortage of coke for the Blast Furnaces and inadequate availability of gas for the Steel Melting Shop and the Mills.

A serious mishap, which proved deterimental to the entire operation of the plant, was the collapse of the complete roof structure of the L.D. Section of the Steel Melting Shop of the Rourkela Steel Plant, which occurred on 11th July, 1971. An additional constraint in this plant was the poor performance of the Coke Oven Batteries in general, which resulted in a reduction in the supply of coke and gas.

Continuing distrubed industrial relations affected production in most of the units in the Durgapur Steel Plant.

Disturbed industrial relations in the unit as well as poor and buted to shortfalls in production at the Alloy Steels Plant.

Occasional power failures have also contributed, to a limited extent, to the shortfall in production.

The production at the Fertilizer Plant at Rourkela was adversely affected on account of the shortage of coke oven gas from the Rourkela Steel Plant.

The performance of coke oven batteries in general in practically all the steel plants both in the public and private sectors has been found to be unsatisfactory. Two special groups of experts were appointed by HSL to look into this problem one cach for Bhilai and Rourkela. The services of a leading Soviet Specialist were also availed of. He also inspected the coke ovens in TISCO and IISCO. As suggested by the groups, special repairs to the coke ovens have been undertaken in the Bhilai and Rourkela Steel Plants and appropriate regimes for the operation and maintenance of ovens have been drawn Changes have been made in the organisational set up to ensure greater attention to maintenance and technological discipline.

A special A special group was also constituted by the Government to suggest the suggest the most cost-effective measures for increasing the output of coke. The report of the group has been received and its suggestions its suggestions are under implementation. It has been decided to instal an additional implementation. to instal an additional half battery at Rourkela on a high priority basis. It: rity basis. It is proposed to instal an additional battery Bhilai. TISCO have taken up a phased programme of replace ment of all the: ment of all their old coke oven batteries over a period of years and a new best coke oven batteries over a period of years and a new battery is alreary under erection. IISCO are trying to revive 2 hard alreary under erection. trying to revive 2 batteries which had been blanked off a few years ago. In the large years ago. In the context of the need to rebuild a number of coke oven batteries in the country, it is proposed to adopt an integrated approach in the country, it is proposed bat adopt an integrated approach to the problem of rebuilding batteries and for this proposed to the problem of rebuilding in teries and for this purpose to pool the expertise available in

The poor condition of the batteries resulted in shortage of for the steel melting shop and inadequate availability of gas the effect of shortage of coke oven gas on steel production, use has been resorted to in Bhilai. With the commissioning of coke oven Battery on 25th January, 1972, the problem Proposals have also been formulated for the introduction of

oil firing in the Open Hearth Furnaces, and replacement of benzene in the gas stream by naphtha. These steps will result in the release of benzene, pitch and creosote mixture oil for other uses. It is also intended to increase the percentage of sinter in the blast furnace burden in stages. This is expected to reduce the rate of consumption of coke.

To augment fuel resources at Rourkela, oil firing has been introduced in 2 of the 4 reheating furnaces in the Hot Strip Mill. Oil firing is planned to be introduced in the remaining two furnaces in the next few months.

The reconstruction of the roof of the steel melting shop at Rourkela was completed in record time and in advance of schedule. The reconstruction operations were carried out round the clock and were completed in 4½ months as against the original estimate of 6 months. Production had picked up to a good level by February, 1972.

In order to ensure trouble free operations of the plants at maximum efficiency free from breakdowns and unplanned shutdown, a number of steps have been and are being taken to clear the back. the backlog of maintenance and repairs, to ensure preventive maintenance maintenance according to prescribed schedules, and to arrange for advance for advance of worn-out planning for spares to facilitate timely replacement of worn-out have hear planning for spares to facilitate timely logical plants. The maintenance organisations in the plants have been strengthened and Capital Repair Groups have been set up to regrammes. Regular set up to take care of all major repair programmes. Regular maintenant and preventive maintenance plans are drawn up for routine and preventive repairs and plans are drawn up for routine Capital repair repairs and these are being followed regularly. Capital repair schedules schedules are worked out on a 3 year basis and work on major and capital worked out on a 3 year basis and these schedules. and capital repairs is carried out according to these schedules.

Inspection Inspection Groups have been set up to carry out inspection of the difference of the the different units regularly and to draw up repair programmes on the basis of such inspections. In order to improve planning and availability of such inspections. In order to improve parts and availability of spare parts for maintenance jobs, Spare Parts

A planning in all the plants. Planning and Procurement Groups are working in all the plants.

A 3-year D .... Procurement Groups are working in all the plants. A 3 year Rolling Plan for procurement of spare parts, refractories.

rolls and other essential materials for capital repairs and maintenance has been drawn up so that the required items, whether imported or indigenous, are properly planned for and secured in time and are available when required. The proposal is that, once the rolling plan is approved, foreign exchange required for a year will be allocated in advance. This will considerably reduce procedural delays in providing foreign exchange and obtaining in programmes. Bulking of demands would not only save money in procurement but would also help in import substitution.

Hindustan Steel Ltd. have in hand a number of schemes in volving additions, modifications, balancing facilities, technological improvements, modifications, balancing facilities, technological improvements. gical improvements and replacement of assets of the These are intended to overcome existing imbalances in the main production units. production units, improve overall performance and to gear up the various units. the various units technically to attain production

HSL has evolved new production incentive schemes designed motivate labour and to motivate labour productivity and discourage absentecism and reduce over-time parameters and discourage absentecism been reduce over-time payments. These schemes have already been introduced in the Bhillian Co. These schemes have already Rour introduced in the Bhilai Steel Plant, the Fertilizer Plant at Route kela, a few Department Plant, the Fertilizer Plant at in the kela, a few Departments of the Durgapur Steel Plant and in the Iron Ore and Limeston of the Durgapur Steel Plant and Rour Iron Ore and Limestone Mines and Repair Shops of the Rourkela Steel Plant. The Schemes kela Steel Plant. The question of introduction of these schemes in other units is under in other units is under negotiation with the labour unions.

In the field of industrial relations, efforts continue to made to ensure that industrial relations, efforts continue and that the co-operation disputes are settled by negotiation the project of the p and that the co-operation and participation of workers in the production effort are made duction effort are made more effective. In the Rourkela of Plant, joint consultation has been revitalised by the formation of Joint Production Committee 4 Joint Production Committees through a tripartite agreement with the recognised union. These Countries agreement with the recognised union. These Committees have already started functioning in some of the Department of t functioning in some of the Departments. In the Durgapur Steel Plant and the Alloy Steels Plant, Joint Forums have been formed comprising representatives. comprising representatives from the Management and the Labout Trade Union with a view to Trade Union with a view to preventing sudden stoppages

work and shop-floor indiscipline. The emphasis at all levels is on a participative approach to the solution of problems.

Government are also keeping a constant watch on the performance of the units and the Company through periodical Task Force meetings and reviews. The Ministry also renders all the assistance that is required. There have been five meetings this year of all Duroapur year of the Task Forces for the Rourkela, Bhilai and Durgapur plants and four meetings of the Task Forces for the Alloy Steels Plant. It is expected that as a result of all these measures the product: production in the coming year would show a significant improve-

## Despatches:

The table below shows the despatches during the year 1970-71 and 1971-72:—

Plant					(Qty:in	ooo tonnes	s)
- Addit	-	Finished Prin	Steel	Semis (ir Ingots	ncluding ) Primes	Pig	Iron
Bhilai		70—71 Actual)	71—72 (Esti- mated)	70—71 (Actual)	71—72 (Esti- mated)	70—71 (Actual)	71—72. (Esti- mated)
$R_{ m ourkel_a}$ $D_{ m urgapur}$	•	1237 638	932	272 42·2	500	545 92	470 106
$T_{O_{TAL}}$	•	347	330	183	152	324	273
Alloy Steels	•	2222	1812	497.2	675	961	849·
	•	33.2	32	2 (Ingots)	4	• •	••

Lower production, railway route restrictions and shortage of wagons especially during December, 1971 and January, 1972, had the effect of reduction in despatches. Although the total sales volume will be lower than that of the previous year, domestic grantles tic supplies of iron and steel are expected to be more due to a cutback in exports.

The export earnings of HSL in terms of FOB value were Rs. 53 crores during 1970-71. During 1971-72 they are expected to be about Rs. 22 crores. The fall is due to the increase in domestic demand. tic demand and the restrictions imposed on the export of certain categories of services. categories of finished steel. Exports are now mainly confined to the surplus Pig Iron. The statement below incorporates comparative figures of export of iron and steel during 1970-71 and 1971-72 (estimated):

> (Quantity in 'ooo tonnes) (Value: FOB Rs. in crores)

T.	em						ional
				1970- Quantity	71 Value	1971-72 (Pro Quantity	Value

ed by Government supply of steel, HSL has been supply of steel, HSL has been steel by Government steel by entrusted by Government with the import of certain steel items, the bulk of which will not the import of certain steel items, made the bulk of which will comprise flat products. The imports made by HSL during 1970-71 by HSL during 1970-71 and 1971-72 are reflected in the following statement:

Year 1970—71 (actual) 1971—72 (estimated)	•	(Qty. Value▼:	: '000 tonnes) (cif) Rs. in crores. Quantity
(estimated)	•	•	124 15.7 . 550

## Working Results:

The gross surplus secured by HSL after meeting all expenditure, but exclusive of the provisions for depreciation and interest on Government loans, amounted to Rs. 87.3 crores in 1970-71 as against Rs. 82.8 crores in 1969-70. However, after making a provision of about 26.1 crores for interest on Govt. loans and Rs. 66.8 crores for depreciation, and taking into account 2. count adjustments for earlier periods, the Company sustained a net loss of Rs. net loss of Rs. 5.4 crores in 1970-71 as against a loss of Rs. 10.47 crores in the preceding year. The working results of the various was a sunder: various units during 1969-70 and 1970-71 were as under:—

Profit = +(Rs. in crores) Loss = -

March, 1971 is Rs. 178.2 crores. cumulative loss of the Company from its inception upto

During the current year the financial position of the Company has been adversely affected due to production loss than envisaged earlier and, in particular, by the production loss at Rourkela Steel Plant due to SMS roof collapse. Certain (R. description) Rourkela Steel Plant due to SMS roof collapse.

(R<sub>S</sub>. 6.6 Crors such as the full impact of the Wage Agreement (R<sub>S</sub>, 6.6 factors such as the full impact of the Wage Agreements on account incidence of higher consumption of stores and Spares on account of increased maintenance requirements arising of the ageing of the plants and price escalations (Rs. 6.6 crores), War Risk Insurance (Rs. 0.91 crore), Revaluation of the D.M. (Rs. 1.0 crore), higher liability due to additional adhoc bonus (Rs. 1.5 crores) etc., have also affected the position substantially.

#### **Industrial Relations**

A reference to the efforts which are being made to resolve disputes and to improve labour relations has been made earlief. The Joint Wage Negotiating Committee for the Steel Industry which reached an agreement on wages and allied matters

October 1970 beginning committee for the steel in October, 1970 has also been requested to continue to function as a Joint Name of the continue to function as a as a Joint Negotiating Committee for the industry. It has specially been collected to continue to have specially been collected to the industry. cially been asked to consider how best to solve the problem of stoppages of work. The Committee has appointed a Standardisation Committee has appointed a ardisation Committee to standardise scales of pay and job nomen clatures in the Standardise scales of pay and job nomen in the standardise scales of pay and job nomen clatures in the Steel Industry and to bring about uniformity amenities of leave bell amenities of leave, holidays, medical benefits and age of retirement. One of the ment. One of the major tasks completed by this Committee is the preparation of is the preparation of draft job evaluation manuals for the Blast Furnace Department of the Blast in the Furnace Department of all the integrated Steel Plants in country. The Committee of the priority of the country country. The Committee is also seized of the question of chould ing about uniformity. ing about uniformity in the matter of amenities. This help to resolve disputes in these areas.

#### Capital Schemes:

At Bhilai, the sixth Blast Furnace was commissioned on July 1971. The 7th Coke Oven Battery forming part of Sixth Blast Furnace Complex was commissioned on 25th January 1972. The Detailed Project Report for the expansion the Bhilai Steel Plant from 2.5 to about 4.0 million ingot to be sexpected from the Central Engineering and Design Bureau May or June, 1972. The work relating to the mechanisation Delhi Mines and the installation of the Second Sintering Plant Bhilai is in progress. The final Detailed Project Report Nay Refractories Plant at Bhilia is expected to be ready by

June, 1972. The details of the product-mix, capacity, and source of knowhow for the establishment of CRGO Electrical Sheet Plant at Rourkela are presently under consideration and orders for the preparation of the DPR are likely to be placed on the consultants during the coming year.

The preparation of DPR for the expansion of the capacity of the Alloy Steels Plant at Durgapur from 1,00,000 to 3,00,000 ingot tonnes has been taken up. The determination of product-mix is under consideration.

The feasibility report for the setting up of a Seamless Tube Plant is also under consideration and the work for the preparation of a DPR is likely to be taken in hand in 1972-73.

## Central Engineering and Design Bureau

The Central Engineering and Design Bureau continue to function as Technical Advisers to the Department of Steel on matters connected. connected with the iron and steel industry. The Bureau also continued with the iron and steel industry. continue to be the principal consultants for the expansion of the Bokaro etc. Bokaro Steel Plant from the first stage of 1.7 to 4.0 million ingot tonnes tonnes. The Bureau are acting as Consultants to the Mysore Iron and S. Iron and Steel Limited, Bhadravati, for optimisation of their Plant's Description Plant's performance. The Bharat Aluminium Company have appointed to the appointed the Bureau as their prime Indian Consultant for the design and design and engineering of the Smelter and the Fabrication Complex of the Smelter and plex of the Korba Aluminium Project. The Bureau have prepared a number of feasibility reports and detailed project reports, including a number of feasibility reports and detailed project reports, including a techno-economic feasibility report for the Vijayanagar Steel Plant and for a Special Alloy Steels Plant at Kanpur.

They have They have also been entrusted with the detailed engineering work connected with the detailed engineering work connected with the latter. Having regard to their present competence, the assignments which they have already undertaken and their emerging expansion of their emerging role in the context of the future expansion of in Steel Ind. the Steel Industry, it has been decided to convert the Bureau sint a separate will be one of the into a separate company. This company will be one of the association and set up for Steel and Subsidiaries of the Holding Company being set up for Steel and associated input industries.

### MYSORE IRON AND STEEL LIMITED, BHADRAVATI

Mysore Iron and Steel Limited, Bhadravati was incorporated under the Indian Companies Act, 1956, on April 1, 1962. This Company is a joint undertaking of the Government of Mysore and the Government of India. Its paid-up equity capital (including share application deposits) as on 31st March 1971 was about Rs. 21.72 crores, out which the Government of India's share was Rs. 1.968 crores. The accumulated losses of the Company up to 31st March 1971 were Rs. 3.39 crores.

With the heavy losses sustained by the Company in the passing burden of the burden of interest charges on loans and overdraft was having a crippling effect on the working of the Company. At the request of the Company. request of the Government of Mysore, the Government of India agreed to convert, with effect from April 1, 1971, Rs. 11.23 crores out of the Cart. crores out of the Central loans amounting to Rs. 11.357 cross advanced direct to 37 advanced direct to Mysore Iron and Steel Limited, into thereby raising the Government of India's participation in paid-up equity control of India's participation in paid-up equity capital of the Company from about 10 per cell to 40 per cent to 40 per cent. This step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to bring the debt equipose to 1.1 It is step has been taken to 1.1 It is step has been t ratio to 1:1. It will also help to provide a relief of about Rs. lakhs annually in interest charges. The paid-up capital as 1st April 1971 1st April 1971 thus became Rs. 33 crores. The increase participation of the account of the capital participation of the capital part participation of the Government of India in the equity capital of the Company was an interest of the India in the equity of the India in the of the Company was subject to the condition that the ment of India would have the right to nominate Directors on Board of the Company: Board of the Company in proportion to its investment and senior appointments would be made with the approved of the Government of India ment of India.

A Committee was set up by the Ministry of Steel and Minester (Department of Steel) on August 5, 1971 to report on the step

to be taken to improve the working and profitability of Mysore: Iron and Steel Limited. It submitted its report in February, 1972 and its recommendations have been examined and are being implemented

The Administrative Staff College, Hyderabad was commissioned in August, 1971 for undertaking a techno-economic study to establish the viability of the capital invested so far and to recommend the scope for future investments to improve profitability. Its report which is expected by July 1972 will be compresive and will cover, inter alia, production planning and control, of the Company on profitable lines, Management Information System and introduction of a system of Management by Objectives.

The Task Force on Mysore Iron and Steel Limited met thrice during the year 1971-72 under the Chairmanship of the Steel Secretary, to review the performance of the Company, identify bottlenecks and suggest remedial action.

Attention is being concentrated on increasing production with equipment. A three-year rolling plan has also been introduced procurement of raw materials, spares etc.

With the various measures taken during 1971-72 the working flected in the following table:

				(in tonn	es)
Product		-	Production in 1970-71	Anticipated production in 1971-72	Target for 1972-73
Mild Steel (Saleable) Special Steel (Saleable) Ferro Silicon Cement Castings	· :	:	46,533 37,037 20,693 82,095 13,977	40,000 50,000 20,447 96,000 11,500	60,000 65,000 21,640 100,000 16,100

The working of the Company has also shown improvement in 1971-72 as will be seen from the following table:

Year							Profit/Loss	
							(in lakhs of F	<b>Rs</b> .)
1967-68	•						Loss	206.66
1968-69	•				•	•	,,	268.32
1969-70				•	•	•		239·37
1970-71				•	•	•	••	175.08
7077 70		_	•	•	•	•	,,	;00.00
1971-72	•	•	•	•			Anticipated Profit	;00.00

Mysore Iron and Steel Limited propose to take up for implementation two new schemes in 1972-73, namely (i) the setting up of an additional capacity of 15,000 tonnes of Ferro Silicon involving an outlay of about Rs. 4.14 crores and (ii) a Forge Plant estimated to cost Rs. 5.88 crores. These schemes will help to improve the profitability of Mysore Iron and Steel Limited.

### STEEL INDUSTRY IN THE PRIVATE SECTOR

## Tata Iron and Steel Company

Tata Iron and SteelCompany Limited owns, in addition to the integrated steel plant at Jamshedpur, captive Collieries at Sijua and Jamadoba and an iron ore mine at Noamundi. The Steel Plant at Jamshedpur is the oldest integrated steel plant in the country. It commenced production in 1911 and its present installed capacity is 2 million tonnes steel ingots per annum. This capacity was achieved as a result of introduction of modernisation and expansion programmes which were aided by the Government of India and the World Bank through loans. The plant produces a variety of semi-finished and finished steel items like blooms, bilets, tin bars, skelp, rails, structurals, plates, sheets etc.

Against the installed capacity of 2 million tonnes steel ingots, production in 1970-71 was 1.716 million tonnes ingots. Saleable steel production was 1.709 million tonnes ingots. tonnes. During 1971-72 the production was 1.375 million tonnes. During 1971-72 the production was 1.386 million tonnes.

The company is implementing a scheme of replacement and modernisation including rebuilding the old Coke Oven Batteries, replacement of Boilers and renovation of Blast Furnace, Colliery expansion etc. The total estimated cost of these schemes is Rs. 76 crores. The actual expenditure incurred by the company upto the end of March, 1972 was about Rs. 25 crores. This

is a part of the total plan for new schemes involving an outlay of Ks. 190.45 crores.

A new Coke Oven Battery which is under installation (to make up the shortfall of coke during the rebuilding of the existing Coke Oven Batteries) is expected to start pushing coke in the first quarter of 1973. The rebuilding of three more batteries will be completed by the middle of 1973.

The company proposes to increase the production of clean coal from its captive collieries by 0.3 million tonnes a year. scheme has been approved in principle and details are worked out.

A pelletisation Plant has recently been installed by company at its Noamundi Iron Ore Mine for utilising iron fines and blue dust generated in the course of mining operations. The plant consists of two units of a total capacity of 850,000 tonner of rolled tonnes of pellets per annum.

### Indian Iron and Steel Company Limited

The Indian Iron and Steel Company Limited addition to the integrated steel plant at Burnpur, an Iron for dry no Kulti A 11. dry at Kulti (which is also making spun pipes) and captive Collieries at Changle at Changle Collieries at Chasnala, Jitpur, and Ramnagar near Burnput and an Iron Ore Minand an Iron Ore Mine at Gua. The steel plant has at present a rated capacity of 1 a rated capacity of 1 million tonnes of ingot steel. This capacity was achieved city was achieved consequent on two expansions undertaken 1953 and 1955 1953 and 1955. The various items manufactured by include billets have include billets, bars, rods, rails, structurals and sheets.

The company's Colliery at Chasnala is being expanded at a tof about Re 25 cost of about Rs. 35 crores, in order to supply the coal requirements of the companion ments of the company amounting to about 66,000 tonnes day. A rope way has also day. A rope way has also been laid from Chasnala to Burney for the transport of for the transport of coal. This scheme has been financed by loan from the World Bank.

Against the installed capacity of 1 million tonnes of steel ingots, production in 1970-71 aggregated 0.627 million tonnes and in 1971-72 0.617 million tonnes. Saleable Steel production was 0.523 million tonnes in 1970-71 and 0.493 million tonnes in 1971-72.

For 1972-73 the plant has fixed a target of 700,000 tonnes of steel ingots and this is expected to yield 546,000 tonnes of finished steel. The plant has been advised by Government to aim at a production of 800,000 tonnes of ingots in 1972-73.

The production in the plant has been going down primarily because of problems of maintenance. A scheme has been worked on the plant ed out to instal balancing facilities, with a view to enabling the plant to achieve the rated capacity of 1 million tonnes of ingots per year.

The Company has been permitted by the Government to effect further expansion in its steel ingot manufacturing capacity by 0.3 by 0.3 million tonnes. In 1966 the World Bank had, with Government of the World Bank had, with Government approval, advanced a loan of 30 million dollars to HSCO in World Bank to USCO for effecting this expansion. In 1969 the World Bank stopped for stopped further drawals on this loan. In 1969 the loan was cancelled by the restriction of the loan was the cancelled by the restriction of the loan was the cancelled by the continuous t cancelled by the World Bank. Subsequently the Government decided that decided that the expansion should be financed from internal resources resources. IISCO has submitted a detailed scheme for expansion to 12. sion to 1.3 million tonnes of steel ingots. This scheme is under detailed examination.

## Re-Rolling Industry

The Steel re-rolling mills, which are a complement to the steel - rods flats, hoops, basic steel re-rolling mills, which are a companies, steel producers, roll steel into bars, rods, flats, hoops, strips, lies producers, roll steel into bars, rods, They have Strips, light structurals, railway equipment, etc. They have been broadly classified as 'billet based' and 'scrap based'. The rechnical Technical Committee appointed by Government in its report in 1965 has 1965 had assessed the annual capacity of billet re-rollers at milling assessed the annual capacity of milling assessed the annual capacity of billet re-rollers and 2.78 had assessed the annual capacity of billet resources and of other tonnes of scrap re-rollers at 0.73 million tonnes and of other mills at 1.20 million tonnes.

The capacity utilisation of re-rollers depends on the demand (domestic and for export), and the availability of billets as well as re-rollable scrap. With increased demand for bars and rods in the domestic market and for export, the re-rolling industry faced shortage of billets during the year. The average availability of billets for re-rolling was around 6 lakh tonnes per annum including about 1 lakh tonnes of imported material as re-rollable scrap. With increased demand for bars and rods on double shift basis. A part of the shortage is being met by import of billets and through the production of billet size ingots from electric furnaces.

Production of additional quantities of billets by the main ducers is being access. producers is being encouraged. However, billets for sale for be made available only to the extent they are not utilised for further processing in the extent they are not utilised for further processing in the finishing mills of the plant. Measures for automatica bills. for augmenting billet production in smaller units comprising scrap based electric furnaces and continuous casting machines are in hand. The are in hand. The new units are expected to go on stream from the end of 1972 onwards. The capacity of each unit has by and large been fixed at 50,000 tonnes per annum in the interest of standardisation of standardisation. of standardisation of plant and machinery.

So far 17 letters of intent have been issued. These schemes when fully implemented would create an additional capacity by about 9,00,000 tonnes. Five of these have been sponsored by State Governments that State Governments through their State Industrial Corporations.

Two other schemes 1. Two other schemes have been sanctioned on the specific condition that they would be dition that they would be implemented in the joint sector. the other schemes in the sector. the other schemes in which letters of intent have been issued; it is expected that the it is expected that the public financial institutions will have substantial participation substantial participation.

Billets are the main raw material for the re-rolling mills are in short and to These are in short supply. The present shortage is estimated to be of the order of 500,000 be of the order of 500,000 tonnes per annum. As the produced by the main and the ma produced by the main steel plants are intended to be the within the plant for being within the plant for being rolled into finished products. scarcity is not likely to ease without the development of some

other sources of supply of billets. One of the methods would be the setting up of scrap based electric furnace-cum-continuous casting billet making units in the country. In this connection this Department has been examining the present as well as projected jected availability of scrap in the country.

## Wire Rods

Currenly there is a shortage of mild steel wire rods to the extent of about 100,000 tonnes. There is also a shortage of high combined to the same high carbon and other special categories of steel to the same extent extent. The production of mild steel wire rods during 1970-71 Was about 4 lakh tonnes. The shortage is being made up partly

In the case of high carbon and other special steel wire rods relief to the extent of about 40-50,000 tonnes is expected from the second extent of about 40-50,000 tonnes is expected from the second furnace of M/s. Mukand Iron and Steel Works Ltd.,
and a slight. The and a slight improvement at Bhilai of about 5,000 tonnes. The position is 121. position is likely to improve substantially when the 4/5 continuous castin likely to improve substantially when the 4/5 continuous castin nhous casting plants, for which electric furnaces have already been ordered out and are due for delivery this year or early next year, go into production in 1972-73.

Letters of Intent for a capacity of 60,000 tonnes have been ded to some of wire rods will issued to some parties. improve after some of the units go into production. The supply position of wire rods will

# Wire Drawing Industry

There are at present 15 comparatively large units, licensed the Ind. Present 15 comparatively large units, 1951, Under the are at present 15 comparatively large units, necessary the Industries (Development & Regulation) Act, 1951, the second types of wires. Against engaged in the manufacture of different types of wires. Against the annual in the manufacture of different types of 1.8 lakhs the annual indigenous production of this industry of 1.8 lakhs tonnes in 1969-70 production during 1970-71 was 1.4 lakh tonnes ton production during 1970-71 was 1.4 lakh tonnes The production production during 1970-71 was 1.4 lakin tonnes. These during 1971-72 is expected to be about 2 lakh manufacture mild steel wires. tonnes. These units, by and large, manufacture mild steel wires.

Letters of Intent have recently been issued to a number of firms for the manufacture of wires thinner than 18G, and other special wires, to cater to the needs of engineering industries. The available of the needs of engineering industries. ability of high carbon wire rods despite substantial production by Bhilai, and increase in the production of M/s. Mukand Iron and Steel 1 and and Steel Ltd., is still short of requirements. To the necessary, imports of special categories of wire rods, and to small extent of wires are being permitted to industry.

#### Pig Iron/Sponge Iron

The present licensed capacity to manufacture pig iron and one iron is 716000 sponge iron is 7,16,000 tonnes and 1,00,000 tonnes annum respectively. annum respectively. In view of the excess availability of pig iron from the main plants with the exception of unit, not much unit, not much progress has been made in setting up additional capacity for manufact. capacity for manufacture of pig iron. Sponge iron can substitute scrap and con and con can substitute scrap and con and con can substitute scrap and con and c tute scrap and can serve as a raw material for the electric furnalistic industry. industry. Possibilities of exports either in the form of sponding iron, or pre-reduced as a raw material for the electric reports. iron, or pre-reduced pellets also exist.

To meet the shortage of scrap, and the need to utilise in grade iron ore and non metallurgical grade coal available large quantities in the large quantities in the country, Government are keen to develor sponge iron manufacture. sponge iron manufacturing capacity based on solid reductant.

The Industrial Devialation The Industrial Development Corporation of Orissa hold a position of Intent to manufacture 100 000 of Intent to manufacture 100,000 tonnes of sponge iron annum annum.

APIDC's proposal to have a demonstration plant for manufacture of sponge iron with UNDP assistance for a capacity of 30,000 tonnes per annum has been agreed principle by the Government. The TIDCO, SICOM of Mahati shtra Government shtra Government, Haryana State Industrial Corporation RIDCO's are also original RIDCO's are also evincing interest in the production of sport iron.

### Tinplates

The present installed capacity in the private sector is 150,000 tonnes per annum. Actual production of tinplate during 1971-72 is estimated at about 1 lakh tonnes.

The Tinplate Company of India has been issued an Industrial Licence for expanding their capacity by 90,000 tonnes of electrons. electrolytic plates per annum. This scheme is likely to materialise during 1974-75.

## Cold Rolled Strips

There is an increasing demand for cold rolled strips in view of its large uses, especially by Engineering Industries. The anticipation and the second representation of the second representation anticipated demand in 1973-74 for C.R. strips is about 120,000 tonnes tonnes. The various fields of applications of C.R. Strips include the various fields of applications of the various fields of the various fi blades, instrument panels, etc. In the context of these end uses, the available. the availability of cold rolled strips can considerably help small employment employment oriented units. Encouraging installation of C. R. Mills in the oriented units. Mills in the economical country and manufacture of C. R. strips is more economical than importing C. R. strips. A number of Letters of Intens L. of Intent have accordingly been issued by the Government for additional/new capacity.

## Alloy Steels

The present installed capacity in the private sector is about 100,000 tonnes per annum. Messrs. Mahindra Ugine Steel Company, Guest Keen Williams and Globe Steels have installed capacity of 30,000 tonnes, 45,000 tonnes and 20,000 tonnes per annum respectively. Additional capacity of about 40,000 tonnes per annum is under installation by Messrs Bihar Alloy Steels

The Some Ltd. Some of the units also hold either industrial licences or Letters of the units also hold either industrial needs the manufacturent for installation of new/additional capacity for the manufacture of alloy steels.

#### Ferro Alloys

Rapid expansion of steel industry in India warrants a well developed ferro-alloys industry viz. ferro-manganese, ferro-silicon, ferro-chrome, ferro-tungsten and ferro-titanium etc. estimated production of ferro-silicon and ferro-manganese in the country is 26,962 tonnes and 1,71,000 tonnes respectively. Recently Letters of Intent have been issued to some parties for establishing an additional capacity of about 45,000 tonnes ferro silicon ferro-silicon per annum. Apart from meeting the growing indigenous demand the ferro alloys have an attractive export Ferro-manganese, roughly of the order of 15,143 potential. tonnes valued at Rs. 1.62 crores was exported during April To meet the increasing domestic 1971 to September, 1971. demand and to maintain the level of exports, larger capacity, being encouraged to come up. With the commissioning of ferro-chrome unit of the Orissa Industrial Development Corporation the install tion the installed capacity would be about 25,000 tonnes ferro-chrome /cilianal ferro-chrome/silico-chrome. There is a surplus of ferro-chrome. which is currently being exported to Japan. During 1971-72, upto August, 2361 tonnes of ferro-chrome valued at Rs. 66.44 lakhs was exported from India.

Letters of Intent for the production of ferro-vanadium have been issued to M/s. Industrial Development Corporation Orissa and to a private sector unit to manufacture 480 tonnes and 350 tonnes per annum respectively.

### BOKARO STEEL LIMITED

Bokaro, the fourth integrated steel plant to be built in the Public Sector, is the biggest industrial project undertaken in the country so far, both in terms of the magnitude of work and the investor, is the biggest industrial project until the investor so far, both in terms of the magnitude of work and the investment involved. Of the total investment on steel development lopment under the Fourth Plan, Bokaro alone will account for about se about 65 per cent, i.e. Rs. 680 crores out of a total provision of Rs. 1,053 crores. Bokaro will make a decisive contribution to the economic development of the country by substantially meeting the domestic meeting the demands for flat products. The gap in the domestic supply and demands for flat products. The gap in the million ton-demand of finished flat products estimated at 1 million tonnes in 1974-75, will be filled by the production of 1.2 million tonnes from Bokaro in the first stage.

The Detailed Project Report prepared by the Soviet Consultants and approved by the Government in March, 1966
envisage of which 1.7 envisaged Bokaro as a 4 million tonnes plant of which 1.7 million tonnes is an intermediary stage of construction. A significant warms is an intermediary stage of construction. A significant warms. nisicant portion of the work for the 4 million tonne plant is, therefore, being incorporated in the construction of the first stage. A per cent stage. Approximately 84 per cent of earthwork, 74 per cent concreting and stage. of concreting, 84 per cent of earthwork, 14 per cent of underground communications, 73 per cent of structural steelwork and 64 per cent of equipment be completed erection for the 4 million tonnes stage would be completed during the first stage. Indigenous Effort:

Whereas the three earlier steel plants in the Public Sector Were "turn key" projects, where the bulk equipment, technological structures projects, where the bulk equipment, a sense India, and refractories were imported, Bokaro is in Besides participation a sense India's first 'swadeshi' steel plant. Besides participation

of Indian organisations in design and engineering of the project in a significant way, about 90 per cent of building structures, 100 per cent of technological structures, 65 per cent of mechanical services. nical equipment, 48 per cent of electrical equipment, 80 per cent of electrical equipment, Laine cent of instruments and 77 per cent of refractories are procured indigenously for the construction of the First Apart from savings in foreign exchange, this has acted as catalyst to engineering and refractory industries in the country. Much of the equipment ordered from indigenous industries for Bokaro is being manufactured. Bokaro is being manufactured for the first time in the country.

Manufacturing specification Manufacturing specifications for as much as 90,000 tonnes equipment have been obtained as 90,000 tonnes of the second specifications for as much as 90,000 tonnes of the second specifications for as much as 90,000 tonnes of the second specifications for as much as 90,000 tonnes of the second specifications for the first time in the course of the second specifications for the second specification specification specifications for the second specification specif equipment have been obtained from the Soviet Union to enable the engineering industrian the engineering industries in India to undertake manufacture of these items. This has a second open the Soviet Union to the second open the se of these items. This has significantly contributed towards development of machine to the contributed towards the development of machine building know-how and technology.

The requirements of contributed toward technology. The requirements of sophisticated varieties of refractories Bokaro are now being met to a sizeable extent indigenously Besides, a variety of skill. Besides, a variety of skills in steel plant construction are being acquired by Indian 4-1-1. acquired by Indian technicians and workers.

#### Contribution of Public Sector

Hindustan Steelworks Construction Limited has taken the entire civil works for the plant estimated at Rs. 107 cross It has also undertaken for It has also undertaken fabrication and erection of structure steelworks at an estimate. last two years, the erection of sophisticated equipment in certain areas has also been entrusted. areas has also been entrusted to this Public Sector Undertaken.

The machine building and to The machine building and heavy electrical industries have taken supply of about 55 taken supply of about 55 per cent of the equipment valued Rs. 122 crores. These includes the equipment valued of the equipment Rs. 122 crores. These include Heavy Engineering Corporations Mining and Allied Machine Mining and Allied Machinery Corporation, Heavy Electricals

Bharat Heavy Electricals Bharat Heavy Electricals, Garden Reach Workshops, etc.

#### Expansion of the Plant

Initially the intention was to go straight from the 1st 5th 7 million tonnes) to the straight from the 1st 5th 1 (1.7 million tonnes) to the 2nd Stage (4 million tonnes).

meet the increased demands for steel it was decided at the beginning of 1971 to have an intermediate stage of 2.5 million tonnes. This expansion is now being undertaken so as to achieve a capacity of 2.5 million tonnes as a "crash" programme by March, 1974.

A feasibility report on the further expansion of the plant to fully utilise the built-in capacities of the primary mills is. under preparation by the Principal Consultants-CEDB.

Significant Achievements during 1971-72:

The construction work on Stage I has made progress at a did not be first blast rapid pace during the year. The civil work on the first blast furnace complex is complete, except for some minor finishing items. items. For Stage I as a whole, 99.3 per cent of the earthwork excaver: 83.7 per cent excavation, 85.8 per cent of RCC and concrete, 83.7 per cent of the many services. The of the underground communications have been completed. The quantity of more than quantity of steel structures erected during 1971 was more than 71,000 to steel structures erected during 1971 was done 71,000 tonnes; this is one and a half times of what was done during 1972 during 1970. About 39,000 tonnes of equipment have been erected during erected during 1970. About 39,000 tonnes of equipment 1970. The structures and 1970. In fact, the monthly rate of erection of structures and equipment has more than doubled from about 5,500 tonnes in October 1070 more than doubled from about 5,500 tonnes in October 1970 to more than doubled from about 3,300 the end of more than 11,000 tonnes per month towards increased five the end of 1971. The refractory lining work increased five times, i.e. c. 1971. The refractory lining work increased five 1971. times, i.e., from 5,568 tonnes in 1970 to 34,026 tonnes in 1971.

In preparation for the commissioning of the first blast furnace preparation for the commissioning of the mac commissioned various units are now being tried out and commissioned various units are now being tried out and commissioned c missioned as they are ready. Arrangements for the supply of Service water from the Tenughat Dam on the Damodar river the opening from the Tenughat Dam completed. A 43 k.m. for the water from the Tenughat Dam on the Damoual long seration of the plant have been completed. A 43 k.m. long gravity canal from the Tenughat reservoir brings the water to the first cooling reservoir which has a surface area of nearly 3.3 sq k.m. Similarly, the arrangement for the supply of power

from DVC grid has been completed with the energising of Main Step-down Sub-station No. 1 and extension of 132KV lines to the other main units. In the plant's own Thermal Power Station the erection of the first of the two 55,000 MW turbines has been completed. The chemical flushing of the first boiler is over and this boiler will shortly start generating steam. The erection of the first Torbe of the first Turbo Generator and the Turbo Blower is also over and these will be available. and these will be tried out as soon as steam becomes available. The market is a soon as steam becomes a the state of the market is a soon as steam becomes a sound becomes a s able. The mechanised Coal Handling Plant is expected to ready soon when it was soon as steam becomes to be ready soon when it was soon as steam. ready soon, when it will be possible to start receiving the supplies of coal. The Coal and its plies of coal. The first Sinter Band has been tried out and its auxiliaries are in the auxiliaries are in the final stage of completion. The mechanised iron are bondling nised iron ore handling and blending systems are also ready and the supply of ore from Kiriburu mines has already menced. The blands menced. The blast furnace is in an advanced stage of completion and its various tion and its various charging and other systems are being tested in trial runs. The in trial runs. The erection of the first coke oven battery been completed the been completed; the heating up of this battery, which comments the ced on 6th March this ced on 6th March this year, was a major step in bringing plant to an operational plant to an operational stage.

Another significant achievement of the year was the The mencement of the work on the second stage of the plant. civil work on blast furnaces No. 4 and 5, coke oven battery 5, Converter No. 5 and 6 5, Converter No. 5 and Cooling Pond No. 2 is already in gress. Bulk of the contract of the con gress. Bulk of the orders for equipment and refractories of 2.5 million tonne crash 2.5 million tonne crash programme have been placed.

#### **Project Cost Estimates**

The Government sanctioned in November 1966 an estimation of the first sanction of the fi amounting to Rs. 620 crores for the construction of the stage of the plant. stage of the plant. The cost for off-site facilities viz., township ores, mines and quarries. ores, mines and quarries, Tenu Canal, etc., was estimated at 151 crores, making a total actional actional actions. 51 crores, making a total of Rs. 671 crores. These estimated have since undergone revision. have since undergone revision mainly because of the increase the cost of indigenous are the cost of indigenous equipment and due to escalation the grates of wages and materials like steel, cement, etc.

crease in the cost estimates of the supplies from indigenous sourees is about Rs. 60 crores, of which supplies from HEC alone account for Rs. 45 crores. The increase on account of escalation. in materials and labour is estimated at Rs. 20 crores. The revised seed some sed cost estimate of the plant including off site facilities is Rs.. 758 crores. The estimates for the Second Stage will be pre-Pared as soon as the Principal Consultants have updated the Project Report.

### Financial Structure

The authorised capital of the Company of Rs. 500 crores. has been fully subscribed. Investment on the plant in excess of this capital. The of this amount is being made in the shape of loan capital. The total experience of the shape of loan capital. The total expenditure on the project till the end of January 1972 was Rs. 504 Rs. 594 crores. This included a sum of Rs. 94 crores drawn.

This will be converfrom the Government towards loan capital. This will be converted into equitable towards loan capital. ted into equity capital, as the Govt, have already taken a decision raise the Government have to raise the equity capital, as the Govt, have already taken a also decided equity capital to Rs. 600 crores. Government have also decided to allow an interest holiday on the loan capital till' the 31st March, 1978.

The budgetary estimate of expenditure for the year 1971-72. is Rs. 154 crores, including Rs. 11 crores for the expansion programme. This amount is expected to be fully utilised during the year. This amount is expected to be fully unused an inclusive of Provision for the year 1972-73 is Rs. 163 crores. inclusive of Rs. 74 crores for the expansion programme.

# ROKARO STAGE I (1.7 MILLION TONNES)

The detailed Project Report prepared by the Soviet Consultants, M/s. Tiaipromexport was accepted in March, 1966 and in the USSR were placed orders for equipment to be supplied from the USSR were placed as 1966. The in May 1966. M|s. M. N. Dastur and Company were appointed civil India. M|s. M. N. Dastur and Company were appointed. as the Indian Consulting Engineers in February 1967. The Steel and structure Engineers in February 1967. The Steel and Structure Consulting Engineers in February 1967. civil Indian Consulting Engineers in February 1907.

Steelworks Consulting Engineers awarded to Mis. Hindustangular Steelworks were awarded to mis. Hindustangular Sublic sector undertaking. Steelworks Construction Limited, a public sector undertaking. The work on Stage I commenced in October 1967.

#### Progress of Civil Works

The progress of civil work on Stage 1 of the Project till February 1972 was as follows:—

	Unit	Total Quantity	Progress	Percenture to total
Excavation	cbm	12,794,612	12,699,911	99 <sup>, 3</sup>
Concrete	cbm	[1,883,715	1,616,799	<b>85</b> ~
Underground communications	Metres	286,906	f 240,103	83:1
.Permanent railway tracks	Metres	131,301	55,992	42.6

The controlled earth filling work has been completed. civil work on the first blast furnace complex is nearly completed. the progress at the end of January 1972 being 100 per cent earthwork, 99.95 per cent of RCC and concrete and 95.4 per cent of underground communications.

### Supply of Steel Structures

Of the total 263,864 tonnes of building and technological structural steel work involved on Stage I 214,738 tonnes, till 81 per cent of the total requirement, had been received. February 1972 as shown in the statement below:

	الرقاقية
Sources	Total quantity Supplies
HSCL	163,205 129,889
HEC	28,780 · 16,03 <sup>6</sup>
USSR	16,476 41,580
Hal	55,4 <sup>0</sup> 3

### Erection of Steel Structures

The progress of erection of structurals as at the end of February 1972 was as follows—

	Total quantity	Erected
Technological	84,183	43,685
Building	179,681	103,731
,		
	263,864	147,416

Thus, nearly 69 percent of what has been received was ereced by the end of February 1972. On the first blast furnace complex, almost the entire building structures and 93 per cent of technological structures have been erected. As against 47,377 tonnes of structures erected during 1970, the tonnage erected during 1971 was 71,148. There has been a further rise in the tempo of structural erection recently.

# Supply of equipment including cranes

The quantity of equipment required for Stage I is 275,594 tonnes. The sources of supplies, the supplies due and the actual receipts till February 1972 were as follows:—

Sources USSR	Total quantity	Supplies due	Actual receipts
Czechosz	102,265	102,265	97,610
	1,400	1,400	1,400
MAMC .	72,242	72,242	41,995
Other public Sector	10,522	10,522	8,132
Private Sector Sour-	9,367	9,367	6,452
	79,798	48,420	34,888
	275,594	245,614	190,477

The supplies from indigenous sources still remain considerably behind schedule even though there has been a general improvement in the flow of supplies during 1971-72. Delay in the supply of cranes is posing a serious problem. Against 460 cranes ordered for Stage I, only 258 have been received so far. Against 96 cranes ordered on HEC, most of which are of heavier type and are required for erection, only 26 were despacthed till the end of February, 1972.

#### **Erection of Equiment**

So far 70,597 tonnes of mechanical equipment and 12,292 tonnes of electrical equipment has been erected. During the year 1971, 47,007 tonnes of equipment was erected against 22,152 tonnes during the year 1970.

The rate of erection could have been still higher but for delays in the supplies of steel structures and equipment, shortages of gases and recurrent labour troubles.

### Supply of Refractories

Though the supply of refractories posed a very serious problem in the past, the position has considerably improved now-Out of the total requirement of 200,784 tonnes of refractories-119,591 tonnes are being obtained indigenously and 81,193 tonnes are being imported. About 140,458 tonnes of refractories were received upto the end of February 1972 out of which 85,881 tonnes are from indigenous sources and 54,577 tonneswere imported.

#### Refractory Lining

Against only 5,568 tonnes of refractories erected till December 1970, the total quantity erected till January 1972 came to 41,820 tonnes. The refractory lining on the 1st Coke Oven Battery has already been completed and the heating of the battery has started. Similarly the lining of the refracories in

the 1st Blast Furnace and the stoves is nearing completion. Refractory work on the second coke oven battery is about 50 per cent complete.

### Captive Refractory Unit

In view of the difficulties experienced in the procurement of refractories indigenously, it was considered necessary to develop a captive source of supply. The Government have, therefore, acquired the Asian Refractories Plant, which was lying closed since 1969, by an Act of Parliament passed in December, 1971. A company subsidiary to Bokaro Steel Limited is being formed for managing this plant. It is planned to produce 12,000 tonnes of fire clay bricks during the first year of production i.e., 1972-73

Though rapid progress on the construction of the plant has been made during the course of the last one or two years, the pace has to be further increased to keep to the schedule. Efforts are constantly being made to remove the bottlenecks and accelerate the pace of work. Though the civil work is in an advanced stage for the project as a whole, the concreting in the hot rolling mills is behind the schedule. The work on underground communications is also lagging behind in the steel melting shop, refractory materials plant and the hot rolling mills. HSCL are making every effort to augment their resources in

with the increase in the volume of structural fabrication and erection work, the requirement of acetylene and oxygen for Bokaro went up sharply. Even after mobilising the to meet the entire Eastern region, it has not been possible a serious impediment in the way of pushing the erection programme further. Besides tapping other sources, a temporary station has been installed in the plant itself by buving

liquid oxygen from outside. Along with the procurement additional cylinders, which are of imported origin, the supply of oxygen will improve. Efforts are also being made to commission the plant's own acetylene plant on a priority basis.

The critical position created by the default of indigenous refractory manufacturers some time back, has been overcome by importing refractories from USSR and Poland on a much larger scale than was originally envisaged and also by providing suitable technical assistance to such of the indigenous manufacturers as are keen about fulfilling their obligations. The deliveries of refractories from indigenous sources appear now more assured and stable

Closer watch on the progress of supplies from indigenous manufacturers continues to be exercised both at the plant level and at the Ministry level. Periodical review meetings are held under the Chairmanship of the Steel Secretary with HEC MAMC, GRW and major suppliers of equipment in the private sector. The Inspection and Progress Organisation with Cells Ranchi, Durgapur, Calcutta and Bombay continue to follow up the supplies from all Undertakings in and around places.

Departmental erection of structures and equipment has the resorted to where the contractors have either abandoned work or failed to keep to the schedule. This measure has ed to fill the gap created by the withdrawal of some contractors and has significantly boosted the pace of erection work. present, there are about 4,500 departmental persons engaged erection of mechanical and electrical items; this number increase by another 4,000 when erection in the rolling areas is taken up

The Industrial Relations Department has been strengthen in to improve the industrial climate at Bokaro particularly chast establishments of some of the contractors and their labour.

liaison is maintained with the labour department of the State Government.

### Raw Materials

The annual requirements of the major raw materials for the first stage are as follows:—

(a) Iron Ore
(b) Coal
(c) Limeston:

4.17 million tonnes

4.3 million tonnes

1.145 million tonnes According to the original planning, the entire requirement of ever de was to be met from Kiriburu mines of NDMC. However, due to the delay in the expansion of the Kiriburu Mines, it became necessary at a late stage to make alternative arrangements, specially for the supply of fines. Arrangements have now been made for movement of one rake per day of "washed" fines from Noamundi mines; this would be supplemented by supplies from Bolani mines. The supplies of lump ore have already. The supplies of lump ore have already started from Kiriburu. The supplies of rump of first Color of the manner of coal for the color washeries at first Coke Oven Battery will be met from the coal washeries at Kargali and Dugda; later when the second Coke Oven Battery is commissioned, these supplies will have to be supplemented by

The requirements some quantity of washed coal from Kathara. The requirements of lime stone for the Blast Furnace and steel melting shop will be met from the Blast Furnace and steel mening and Rutage. The captive mines being developed at Bhavanathpur

To consider the whole question of supply of raw materials, capacity, particularly for the expansion of Bokaro to its full Committee to review the arrangements for the supply of iron the linkages of coal washeries for the supply of coal to Bokaro the Various stages of expansion.

Construction Schedule

According to the present schedule, the erection of different units of Stage 1 is to be completed in a phased manner by March 1973. The commissioning of the different units would take another three to six months after the erection is completed. According to this schedule, a period of about 5½ years has been provided to complete the first stage of 1.7 million tonnes of ingot steel and 0.88 million tonnes of pig iron from the commencement of the work in October 1967. This schedule is extremely tight having regard to the fact that a substantial portion of the work related to the 4 million tonne capacity is included in construction of the Stage I.

Concerted efforts are being made to complete the remaining work on the first blast furnace complex. The completion erection of this complex was envisaged by December 1971 and its commissioning by March-June 1972 on the assumption all the structures and equipment would be supplied by 1971. The supplies have not been fully completed as scheduled and deliveries of certain items are still outstanding. The delays in supplies have considerably dislocated the erection programme. Nevertheless, all resources have been mobilised to procure the remaining supplies expeditiously and to complete the crection the an endeavour to commission the first blast furnace as near to the set schedule as possible.

#### BOKARO STAGE II

The expansion of Bokaro from 1.7 million tonnes to 4 million near in the arms. tonnes in the second stage has been taken up. The Central Engineering and Design Bureau are the Principal Consultants for this expansion programme, a role performed by the Soviet & Consultants in the first stage, and Messrs M. N. Dastuf Company have similar consultancy functions as during the first stage. Under the stage. Under the expansion programme, 3 Coke Oven Batterjes and 2 Blast France and 2 Blast Furnaces similar to those in the first stage are to added. In addition In addition to one more 100 tonne LD Converter 2 Con erters of 250-tonnes capacity will be installed. The CEDB

have already updated the Project Report in respect of these units. No change is envisaged in the Soviet DPR in respect of Thermal Power Plant and Turbo Blower Station and the Hot Rolling Milis. It has, however, been decided to instal a 5-stand 1400 mm tandem mill to meet the requirements of cold rolled sheets to a thickness of 0.15 mm for tin plating, in place of 4-stand 1,700 mm tandem mill provided in the Soviet DPR. The Soviet Union has agreed to design and supply the equipment for this mill as well as for the finishing lines. The implementation of this expansion programme depends primarily on the completion of the second steel melting shop. Every endeavour is being Show to a target of completing the Second Steel Melting Shop by December 1975 so as to commission the 4 M.T. capacity by the middle of 1976. As far as the cold rolling mill complex is concerned, the equipment is expected to be delivered from the USSR during the period 1975-76 and the erection will be completed by 1978.

HSCL have been awarded the civil engineering work for the expansion programme also. They have commenced the work on the coke ovens, the blast furnaces, the cooling pond No. 2 ment the steel melting shop. Out of 132,000 tonnes of equipment. ment required for Stage II, 113,000 tonnes would be indigenous.

Letters and the supply of this Letters of intent have already been issued for the supply of this equipment have already been issued for the supply of this whose equipment to the principal public sector undertakings whose share in the supplies will be about 52,500 tonnes. The specifications at the supplies will be about 52,500 tonnes. cations for the balance quantities to be obtained against open tenders of the balance quantities to be obtained against open tenders are being prepared. For the expansion programme, it is planned to utilise the production facilities already developed at Bobon plates and at Bokaro for items such as ingot moulds, bottom plates and hot tops.

2.5 million tonnes Crash Programme

This expansion is proceeding on a crash programme basis and is expansion is proceeding on a crash programmer proving an expected to be completed by March 1974. Besides improving the could be completed by March 1974. proving the availability of hot rolled sheets and coils, this would would involv eaccelerating installation of one additional coke oven bettery, the 5th 100-tonne LD Converter, an additional oxygen plant and other auxiliary facilities included in the second stage expansion programme.

The total quantity of equipment required for this programme is about 26,416 tonnes, out of which 4,495 tonnes including equipment for the 5th LD Converter, are being imported from the USSR. HEC and other public sector industries will meet the requirements amounting to 10,110 tonnes. Production from the foundry of BSL and other units will be 7.350 tonnes. The remaining requirements will be obtained from private sector sources According to present indications, 18 cranes are required for this programme, out of which 4 have been ordered from the USSR and the rest have been ordered indigenously. Besides the equipment, about 12,331 tonnes of building and technological structures are required. These will be fabricated in the plants cwin Structural Shop. Advance action has already been taken for procurement of steel for this expansion programme.

### Feasibility Report for 5.5 million tonne Stage

Since the primary mills and some other facilities would have built-in additional capacities even after the plant has reached the 4 million tonne stage, the CEDB have been asked to prepare a feasibility report for further expansion of the plant. The report is expected by April, 1972.

#### Network Planning

An important feature of Bokaro is the computerised network planning for construction management. To ensure that targets for completion of different phases of the project are maintained, the technique of "Management by Exception" has been developed using the critical path method. Detailed network for the individual construction zones have been prepared and are being

processed on a computer to high-light the critical areas of work, which require immediate remedial action. The network reports are being used for advance planning of the work in likely critical areas. The computer is also being used for the follow up of equipment supplies. Besides these, other major systems, i.e. inventory control, ordering and procurement of maintenance spares are also being developed.

An Operation Research Department is also being set up at Bokaro which along with the computer set up, will develop into a full-fledged management information system.

### Industrial Relations

The industrial relations between the management and the employees of BSL have been very cordial. However, the industrial relations in the establishments of the contractors have not union rivalries, stoppages of work have been frequent. A 56 seriously impeded the progress of work. BSL management has assistance of the State authorities.

# Commissioning and Operation

The commissioning and operation of a complex and sophisplanning plant like Bokaro demands a high degree of forward
stores, etc. besides selection and training of a large force of
ment was and workers. The nucleus of the Operation Departtan Steel Up some time back for which the services of an
been built up at different levels. Since most of the units being
installed at Bokaro are of a much larger capacity than those set

time here in India, it has been found necessary to obtain services of some Soviet Specialists with actual experience operating such units in order to render technical assistance their commissioning and initial operation.

#### Training and Development

To meet the large requirement of the operating personnel all erent levels and its different levels, which could not entirely be met by the existing plants the recruitment of the operating personal plants. plants, the recruitment and training of engineers and workers different levels different levels was started some years ago. 190 Graduate gineers have since been trained in the steel plants of Hindustry Steel and 97 more Steel and 97 more are under training. 400 senior operatives and 325 junior operatives. 325 junior operative trainees are under training, besides 400 artisely san trainees. san trainees. This is in addition to 333 displaced workers already the same addition to 333 displaced workers already absorbed after training and 105 who are at present under training. sent under training. To provide suitable training to the India personnel in operation and maintenance, training of 244 India specialists in the 11000 specialists in the USSR has been arranged. Experienced truction personnel truction personnel are also being transferred to the operation side on a selective to side on a selective basis. A Management Development gramme to cover the gramme to cover the requirements for the next 3 years has finalised in consultation finalised in consultation with the Institute of Management, cutta and is now being the consultation with the Institute of Management, cutta and is now being implemented.

#### Production Control

One of the special features of Bokaro is its centralised production control. This unit was a tion control. This unit will function from a control room and dering all the important dering all the important data on the operation of the plant distribution of power. distribution of power, fuel, gas, water and oxygen, despatching sets and announcement sets and announcement systems will give extensive communication-cum-conference facility tion-cum-conference facilities. A television net work will provide visual aid to compare the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the systems will give extensive compare the provided with the system of the sys vide visual aid to control areas like the L.D. Convertor and Arrangements have been a Arrangements have been finalised for the installation of a generation computer system. generation computer system for process control.

Finally it can be stated that the year 1971 has been of great significance in the completion of this mighty Project. During this period great progress has been achieved and the day in now not too far away when hot metal will start flowing from the 1st Blast Furnace at Bokaro paving the way for the speedy com-Pletion and commissioning of the other units of the Steel Plant Complex.

## HINDUSTAN STEELWORKS CONSTRUCTION LIMITED

Hindustan Steelworks Construction Limited was incorporated in June, 1964, with the object of taking up the construction of Steelworks and to utilize its spare capacity for other Construction jobs. The Company undertook construction at Bokaro the first instance and is at present mainly engaged on the Bokaro Steel Plant.

The authorised capital of the Company is Rs. 1 crore, out of which Rs. 50 lakhs has so far been paid up. The Company was given a loan of Rs. 100 lakhs during 1971-72. The budget for 1972-73 includes a provision of Rs. 100 lakhs towards loan contribution by Government to the Company.

In 1970-71, the net profit, after providing for depreciation, interest, and taxation, was Rs. 23.65 lakhs against Rs. 10.59 lakhs during the previous year. The Company had created reserves and surplus totalling Rs. 93.57 lakhs at the end of the year as against Rs. 83.62 lakhs at the end of the 1969-70. Company has consistently been declaring a dividend every since 1965-66, the figures upto 1967-68 being 15 per cent, last 20 per cent thereafter. The value of work done for the six years and the net profits earned after providing for depressive years, and taxation by the Company are given below the company are given below.

Year							Value of work done (Rs. in lakhs)	after (Rs. tion (Rs. in lakes)
							478.95	17:50
196<—667	•	•	•	•	•	• .	364.66	2.92
196657	•	•	•	•	•	•	442.77	13.03
1967—68	•	•	•	•	•.	•	20,93.09	40°54.

Subsequently, its scope of work was extended to include the lining of refractories in the Blast Furnace and the erection equipment in the Steel Melting Shop and the Hot Rolling Mill HSCL has proved to be very useful in the construction of steel plant. Wherever the progress by the contractors was satisfactory, HSCL was able to step in and take over the work Many of these works are being executed by the Company of departmental to the departmental to the company of the departmental basis. With the expansion of the scope of activities of HSCT ties of HSCL and execution of many items of work on a departmental basis the Commental mental basis, the Company has been developing specialisations various fields in Table 2019 various fields, in particular, the erection of Steel Melting plex, Rolling Mail. plex, Rolling Mills including Electrical Installations, erection of Steel Mills Blast Furnace Blast Furnace and other Technological Structures including door Pipe-lines Times Technological Structures including door Pipe-lines, Lining of Refractories in the Blast Furnace of Coke Ovens Coke Ovens. The scope of work and activities of the Companies the Guide are being gradually. are being gradually expanded to enable it to undertake the truction of new start truction of new steel plants and the expansion of the existences.

In the field of Civil Engineering also the Company has able to organize departmentally mass concrete pours in Equipment Foundations of over 5,000 cu. m. each, the one was approximately 10,000 cu. m. each, the Pires By First Blast Furnace Complex:

All the civil engineering works in connection with the last Furnace have been works in connection with the Blast Furnace have been completed. By the end of January the erection of builds. 1972, the erection of building structures was completed to extent of 99.24 per cent for the 1st blast furnace complex. structural fabrication work done upto January, 1972, is 1,25, which 100 510 tonnes, out of which 1,00,610 tonnes have been crected. are about 77 per cent and 56 per cent respectively of the work In equipment erection the Company completed 19.7 erection the temperature erection work till the end of January, 1972. The temporared erection work till the end of January, 1972. The tend of January, 1972. The tend of January almost double as compared

what it was a year ago. The following table broadly indicates the progress achieved in the civil engineering works:

			•

### HEAVY ENGINEERING UNDERTAKINGS

Heavy Engineering Corporation Limited, Ranchi, Mining and Allied Machinery Corporation Limited, Durgapur, Triveni Structurals Limited, Naini-Allahabad, Bharat Heavy Plate & Vessels Limited, Visakhapatnam, and Tungabhadra Steel Products Limited, Tungabhadra Dam were transferred to the Ministry of Steel & Heavy Engineering from the Ministry of Industrial Development and Company Affairs in February, 1969. A new undertaking under the name of the Engineering Projects (India) Limited was incorporated in April, 1970. This undertaking is a consortium of eight public sector undertakings specialising in heavy construction. heavy engineering products and heavy electrical equipment. Its main objective is to undertake, on a turnkey basis, the construction of various units of the steel plants and other industrial units both at home and abroad.

As on 31.3.72, the total investment of Government in these companies was Rs. 189.72 crores in the form of equity particular that their total value of production will amount to Rs. 54.33 crores in 1971-72

with a sophisticated and complex product-mix. Their products are complicated and custom made items of equipment, which are a long gestation period. MAMC as its name suggests, was equipped to manufacture mining machinery. Expansion in the coal mining industry did not, however, take place as had been This unit did not, therefore, get adequate orders for

the type of equipment for which it was designed. However, even having regard to these factors, the build-up of production in these times to these factors, the build-up of production in these times to the sectors of in these two units in the initial years had not been satisfactory and consequently heavy losses were being incurred by them. TSL and BHPV commenced commercial production only recently and hard below the stronger transparents. bhadra Steel Dead vet reached a profitable stage. Tungabhadra Steel Products Limited, a relatively small unit, has been making professional and professional unit, has been making professional unit, has been maki making profits from the very start but of late the margin of profit has been characteristics. has been shrinking year by year primarily as a result of severe.

It has been one of the important objectives of this Department to bring about ment to bring about a rapid improvement in the working of these units. It is with all a rapid improvement in the working of these for units. It is with this objective that separate Task Forces for individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were about a rapid individual units were about a rapid improvement in the working of individual units were about a rapid individual units were about a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were about a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid improvement in the working of individual units were a rapid individua individual units were constituted in the Department in April 1971 with a view to making with a view to making a closer appraisal of the problems and prospects of these making a closer appraisal of the problems and prospects of these making a closer appraisal of the problems and prospects of these making a closer appraisal of the problems and problems and problems are properties. prospects of these undertakings, action and evolving suitable for formulating realistic plans of dures for action and evolving suitable programmes and procedures for achieving the desired realistic plans are had a achieving the desired results. These Task Forces have had a The series of meetings, at frequent intervals, during 1971-72. The identify basic approach in these review meetings has been to identify meetings has been to identify bottlenecks, devise suitable measures to overcome them and to dertakings. extend the full assistance of the Department to the undertakings in speeding up the procurement of import licences and scarce materials, recovery of import licences and scarce foreign exchange where increased bills, early allocations of behalf iof foreign exchange where justified, intervention on their behalf iof setting timely deliveries from sub-contractors in India and abroad this companies of the companies of this companies of the companies of this companies of the comp and in securing adequate workload. As a result of this combined and cooperative approach, considerable improvement has already taken place in the working of these units. During the year production has shown a significant increase in all these reduced, paving the way towards reaching of losses has been reduced, the mean the mean that the paving the way towards reaching a break-even stage in the near such such future. In certain specific areas of financial management, such as reduction in over drafts, balanced and realistic levels of inventional management, succepted in the state of pending Line overtime in overtime toiles, faster recovery of pending bills and reduction in overtime improvement and reduction in overtime expenditure. notable improvement has been

methods and procedures of planning and production control have been systematised and further improvements in this direction are continuing. Special attention has been given to the integration of effort and sharing of workload between individual undertakings with a view to achieving fuller utilisation of capacity and improving all-round performance.

With the experience gained in 1971-72 and with the availability of adequate workload, improved methods of production and planning and continuing emphasis on eradicating areas of Weakness, it is hoped that these heavy engineering units will have reached or nearly reached the break-even stage at least by the end of 1972-73.

1 Steel.—7

Heavy Engineering Corporation Limited, Ranchi was incorplants: Corporation Limited, Kancin was plants:

11.60 1144 canacia. A Heavy Machine Building Plant, with an installed capacity to manufacture 105,000 tonnes of heavy machinery and structurals per year; this includes a Steel Structural Shop, with a capacity to manufacture 25,000 ture 25,000 tonnes of fabricated structurals per

of 180,000 forge Plant, with an installed capacity of 180,000 tonnes per year; and

capacity of 10 000 Tools Plant, with an installed capacity of 10,000 tonnes a year.

The Heavy Machine Building Plant was set up with Soviet Machine assistance while the Foundry Forge Plant was set up with Forge Plant and the Heavy Machine Tools Plant were set up with Czech assistance.

The total investment in the company as on the 31st March 1972 is Rs. 255.51 crores of which Rs. 159.50 crores is in the form of equity investment and the balance of Rs. 96.01 crores of which Rs. 159.50 crores is in the form of loans. With affect the balance of Rs. 96.01 crores of sum to the form of loans. With effect from 1st April, 1971 a sum of loans advantage of the loans a Rs. 50 crores of the loans advanced to HEC was converted into the loans granted to the composition of approximately Rs. 9.5 crores, from developthe loans granted to the company, was incurred on the development of the township. In conformity with a recent Government decision this amount has also been converted into equity.

HEC incurred a loss of Rs. 18.18 crores in 1969-70 and a loss of Rs. 14.43 crores in 1970-71. As on 31st March, 1971 the cumulative loss was Rs. 73.33 crores. The loss in 1971-72 is estimated at about Rs. 14.50 crores. Excluding the depreciation and interest payable to Government, there will be a profit of Rs. 1.01 crores. The loss in 1971-72 is comparatively high on account of certain adjustments relating to the earlier period.

The overlap of constructional activities with the operational phase in the initial year of operation, and the long gestation period needed to build up production in a project of this size and type type are two reasons for the losses. To a certain extent, the losses incurred are also attributable to an unduly slow build up of produced are also attributable to an unduly slow build up of production due to a combination of factors including defi-ciencia. ciencies in management over these years as well as unsatisfactors; in management over these years as well as unsatisfactors; in the second of factory industrial relations. The heavy burden of interest, depreciation ciation and over-heads have also contributed to these losses.

The production in the three plants of the company during last three the last three years and this year has been as under:

		,		
	Year		Quantity (tonnes)	Value (Rs. in lakhs)
I. Heavy Machine 1968-69 1969-70 1970-71 1971-72 II. Foundry Forge 1968-69	•	Plant	23,852·50 24,462·00 23,109·00 30,468·00

### Heavy Machine Building Plant

Initial production in the plant commenced in November, 1963 with partly installed machinery. The plant is now complete and production has commenced in all the shops.

Many important items of equipment were manufactured for the first time in the country during the year under report, e.g., 180 Wagon Tippler, Seven Roller Screen, Bell Control Winch, 180 Roll Tonne EOA Crane, Hot Blast Valve, Ten Roller Screen, Roll Crasher, Coke Pusher, Door Extractor, Seperating Lime Mixing Tanks, Auto Dump Car, 140 tonne Iron Ladle Car, Roller Tables for Bokaro Steel Limited and Skip.

### Foundry Forge Plant

The construction of the Plant has been completed except for the 6,000 Tonnes Press. The Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the and of the Press is expected to be commissioned by the analysis and the Press is expected to be commissioned by the analysis and the Press is expected to be commissioned by the analysis and the Press is expected to be commissioned by the analysis and the Press is expected to be commissioned by the analysis and the Press is expected to be commissioned by the press is expected to be commis

# Heavy Machine Tools Plant

The construction of this plant has been completed. To utilise the present capacity better, certain additional models of machine tools like Wheel To machine tools like Wheel Turning Lathes, Deep Hole Boring Machine, Roll Turning Lathes, Deep Hole por facture in the plant in collection. have been taken up for manu. facture in the plant in collaboration with reputed European

### Supplies to Bokaro

The main work load of the company at present relates to Most of supplies for the first stage of the company at present relates the equipment required for the Bokaro Steel Plant. Most of Complex has been supplied to the Bokaro Steel Plant. Most the first Blast Furnace Complex has been supplied. Of a total of 99,579 tonnes of equipment, 67,544 tonnes of equipment was supplied by 1st

January, 1972. Supplies made during April-December 1971 against the first stage contract are as under:

Mechanical equipmen	t	•	•		tonnes
Steel structurals	•	•	•	1,015	tonnes
				13.56	2 tonnes

During this year, order for the Second Stage of Bokarc amounting to 32,480 tonnes of mechanical equipment and 16,758 tonnes of structurals valued at Rs. 4.3 crores have been received.

Besides this, during the period April 1971 to January 1972 orders of aggregate value of Rs. 1,684.71 lakhs have been received ed. A letter of intent for the convertor shop and second sintering plants of intent for the convertor shop and second sintering plants. ing plant of Bhilai Steel Plant was received in January, 1972.

### Inventories

The company has been able to steadily reduce the inventory holdings as the following figures will show:

g		(Rs. in lak	hs)
•	As on 31-3-71	As on 31-12-71	As on 31-3-72 (Budgeted)
(i) Raw materials and components for production (imported indigenous spares etc. and stores in transit) (ii) Work in progress	27,38 12,56 223	22,64 905 262	18,91 990 133
TOTAL .	42,17	34,31	30,14

### Foreign Collaboration Agreement during 1971-72

(i) The agreement for the strengthening of the design bureau of HMBP was signed on 17th December, 1971 with Prommashexport of USSR. This would go a long way in achieving self-sufficiency in the design of new equipment.

(ii) An agreement for technical know-how for the manuford facture of railway machine tools has been signed with M/s. Heqenscheidt of West Germany.

(iii) An addendum to the existing agreement for obtaining know-how for radial and curvrlinear types of continuous casting machine has been signed with M/s. Licensintorg of USSR.

(iv) A Collaboration agreement with M/s. National Forge of trea of USA and M/s. Crusote Loire of France has been signed for the country of the co F ... signed for know-how for the manufacture of crant shafts for Diesel Locomotives Works.

supply of his agreement for the manufacture and supply of Deep Hole Boring Machines and Heavy Duty Cont. Hole Boring Machines and Heavy Duty Centre Lathes has been signed with M/s. Strojimport of Czechoslovakia.

Production Programme for 1972-73

ر يلأ.

The targets of production for the year 1972-73 have been 1971-72 further raised as compared with the production during 1971-72 as will be seen from the following figures:

(in tonnes)

•		(
Ţi.	Actual Production	Targets
Heavy Machine Building Plant Foundry Forge Plant Heavy Machine Building Plant	1971-72	1972-73
Forge Pe Plant		
( Heavy Machine	30,468	51,000
Heavy Machine Tools Plant	20,954	32,230
	· 20 Nos. of machines	40 Nos. of machines 12; Nos. CLW
	· .	(WAG—4); 36 Nears CLW Traction gears (WAM—4) in sets.

Steps for improvement

The Task Force had seven meetings to review the performance of the Corporation. This significantly contributed to-Wards identification of the problems and bottlenecks impeding production in the plants. In addition, the following measures have been implemented in order to raise production:

(i) A system of time keeping with the aid of time recording clocks has been successfully introduced. As a second step, a proper time booking system is also being introduced.

(ii) Improvements are being introduced in (a) production control (b) material management through modern feed back methods involving use of com-Puters. In this respect, training of officers in programming has already commenced.

(iii) Efforts are being made to frame uniform personnel policies and procedures in the three plants.

(iv) Incentive schemes have been introduced in some sections which will be extended progressively to other departments.

(v) Double shifts have been introduced in some sections and a sections and will be extended progressively to other sections also also.

(vi) Maintenance work is being given greater attention.

(vii) Methods of quality control and inspection are being imimproved.

(viii) The top management of the company has been reorganised and streamlined to make it production Oriented oriented. Full time posts of Managing Director and Director and Director (Technical) have been created and fined.

(ix) The key to improving the production of HEC list in the efficient operation of the Foundry Forge Plant. The operations of this plant were examined by a team of the Administrative Staff College, Hyderabad. Areas where improvements can effected are being progressively identified.

1971 under the Chairmanship of the late Shri S. S. Jagota standardisation of standardisation of steel plant equipment. This was done and a view to making maximum use of the available designs the know-how in the country and also to help in cutting down lead time for programmer and also to help in cutting down lead time for procurement of equipments for the steel development programme. ment programme. The report of the committee has been find. At the same in the report of the committee has been the lised. At the same time an assessment has been made of the equipment within The an assessment has been made of dever equipment within HEC's scope of supply for the steel development programme. lopment programme with a view to maximising indigenous contribution to this tribution to this programme.

# MINING AND ALLIED MACHINERY CORPORATION

Mining and Allied Machinery Corporation Limited (MAMC) Was incorporated on 1st April, 1965, to take over the assets and liabilities of the Coal Mining Corporation at Ranchi. It is designed to manufacture various items of underground coal mining equipments including conveyors, coal cutters, loaders. pumps, fans, locomotives with an installed capacity of about 45,000 tonnes per year.

The capital expenditure incurred upto 31st March, 1971 amounted to Rs. 35.48 crores including Rs. 4.97 crores spent on the township. However, the aggregate investment by government including the investment of the control of the township. ment, including loans and advances for providing working capital and ment. and meeting losses, amounted to Rs. 60.45 crores by 31st March, 1971. This included Rs. 20.00 crores by way of equity capital. During 1971-72 the Corporation was given further loans to the

Report of the Committee on Public Undertakings In its 65th Report presented to Parliament in April, 1970 the Committee on Public Undertakings recommended the Winding Winding Corporation Limited winding up of Mining and Allied Machinery Corporation Limited in view of the seemingly unin view of the huge losses incurred by it and the seemingly unpromising prospects in future. This recommendation was carefully examination of the following fully examined by Government in the light of the following

- (i) The Company employs about 6500 persons. Winding up of the company and consequent unemployment of such a large number of persons was an important
- (ii) The machinery and equipment installed in the company are very good and if properly utilised, there

was no reason why the company should continue to incur losses;

- (iii) The company at present produces sophisticated equipment and has recently taken up production of a number of new items which would have had to be imported at considerable cost. Closing of the company would result in a serious set-back to some of the important projects;
- (iv) The consequences of winding up the company have been fully explained to the Labour Unions and their leaders and their leaders and it is expected that Labour relations would continue to improve; and
- (v) There has been a perceptible improvement in the production and performance of the company during the last and the last one year and the trend is likely to be maintained in future.

On these considerations, it has been decided not to wind up the company.

### Financial Results

Ever since MAMC went into production in 1964-65, it has incurring losses To 41 been incurring losses. To the end of 1970-71 the aggregate cash loss (including interest characteristics) loss (including interest charges) amounted to Rs. 24.28 crofes
out of a total accounting laws amounted to Rs. 24.28 crofes out of a total accounting loss of Rs. 33.01 crores. of losses over the last five years is indicated below:

		301011
		(Rupees in crores)
1967-68 1968-69 1969-70		Cash Total Ac- counting Loss (including depreciation)
1970-71 1971-72(e	atimated)	4·58 14·00 4·63 20·16 5·08 26·47 5·21 33·01 2·15 36·42

The reason why MAMC has been neurring continuing losses Are:

- (a) serious shortfalls in the anticipated demand of coal mining equipment;
- (b) long gestation period for engineering projects of this nature manufacturing highly sophisticated equipment;
- (c) mounting burden of interest on loans taken from Government to meet cash losses; and
- (d) slow build up of production due to labour problems and managerial deficiencies.

With a view to provide financial relief to the company from the excessive burden of interest and repayment of loans, Government by ment have sanctioned the following changes in the terms and conditions conditions of the loans granted to the company:

- (a) Out of the total loans advanced by Government, a sum amounting to Rs. 24 crores, which is equivalent to the existing accumulated cash losses, will not attract interest for a period of five years with effect from 1st April, 1971.
- (b) A moratorium on the repayment of loans for a period has of four years i.e. upto and including 1974-75 has been allowed.

The reduced incidence of interest has helped the Company in reducing its loss during 1971-72.

As a result of a series of remedial measures undertaken, the duction pictors production picked up from the latter half of 1970-71 and

(Rs. 'n lakhs)

Production and sales during the past five years have been as under:—

Ye	Year Production (tonnes)		Production						(R 1:
1967-68	.•		•	<b>-</b> .	5,076	226			
1968-69	•	•		•	4,099	158			
1969-70	•	÷		•	_5,764	284			
1970-71	•	•	•			488			
1971-72 (estimate	d)	•		. •	7,742 (11,300	[1,000			

The production this year has been significantly better than in previous years and included a number of sophisticated and complex items supplied to Bokaro Steel Limited, Haldia Port National Coal Development Corporation Limited, Hindustan Copper Limited and other public sector undertakings.

Production per man-year of direct workers has gone up from 1971-72. The overall monthly productivity which was during 1970-71 has increased to 46% (estimated) during 1971-72.

After taking into consideration the production trend in recent estimated value of Rs. 18 crores has been planned for the year

In order to introduce an effective system of control over managerial information, it has been decided that the present IBM puter,

inmproved considerably in 1971-72. The table below reflects the progressive reduction in losses in each quarters of 1971-72;

						• •

### $P_{roduction}$

In the last two years, and particularly during planning of measures have been taken to improve production planning and control so as to systematise the work of materials planning, development of design and technology tooling, procurement of raw materials and bought out components and evaluation of the progress of major orders. The top management of MAMC has been strengthened during the current year to equip it better to deal with its increasing responsibilities and

to ensure rapid improvement in production.

The company is progressively implementing the programme in adequate orders for the original product-mix. As a result of this, MAMC has initiated the manufacture of bulk handling equipment for major ports of India including conveyors, stackers, and ship loaders.

### Industrial Resations

During the first half of the year, labour unrest in the plant took the form of strikes, bundhs, work to rule, noisy demonstrations and go-slow tactics. During the second half of the year, however, the industrial relations improved.

### Workload Prospects

March, 1972 are expected to be of a value of Rs. 34 crores. During the year, the company received orders from Madras and equipments including stackers, reclaimers, ship loaders, conveyors were received earlier. The company is at present negotiating and Tuticorin Port authorities. The total value of orders for including the Potential orders from Visakhapatnam and Tuticorin Ports. In the field of bulk materials handling equipment, MAMC plans to specialise also in the manufacture of bulk handling equipment for Power Plants, Steel Plants and Fertilizer Projects.

MAMC has been nominated as a Member of the Standardisa' Standardisation of handling systems at Steel Plants in India. Systems, pumps, technological structures and other miscellaneous manufacture of man

### Development of Ancilliary Industries

A new Ancillary Industries Development Department, has been started to facilitate development of small-scale industries in Calcutta—Durgapur industrial area. This will enable MAMC to place orders on them for various types of small components, castings, forgings and steel fabrication.

## I'RIVENI STRUCTURALS LIMITED, NAINI

In June, 1965, the Government of India entered into an agreement with M/s. Voest of Austria for setting up a structural shop to meet the shortfall in the steel fabrication capacity of the country in the Fourth Five Year Plan. Triveni agreement with 49 per cent participation in the equity capital India holding the balance of 51 per cent. The product-mix lic gates, penstocks, storage tanks, pressure vessels, steel Plant was to consist of steel building structures, hydraubridges, LD converters, heavy duty cranes, hoists etc. The per annum in the fifth year of production.

The subscribed capital of the company is Rs. 300 lakhs, and that of M/s. Voest Rs. 147 lakhs. As on the 31st March, company of which Rs. 153 lakhs in the cipation and the balance of Rs. 592.40 lakhs in the of loans. Out of the amount of Rs. 439.40 lakhs is in the form cash losses of the company.

### BHARAT HEAVY PLATE AND VESSELS LIMITED, VISAKHAPATNAM

Bharat Heavy Plate and Vessels Limited, Visakhapatnam was incorporated by the Government of India was incorporated by the Government of India was incorporated in June, 1966 with the objective of manufacturing heat and analysis. facturing heat exchangers, pressure vessels, digesters, vessels, ammonia feed condensers, pressure vessers, digestropers, Dished Ends, Storage Technological Structures etc. required by the Petrochemical and other heavy of the plant and other heavy chemical and allied industries. The Plant was set up in the plant industries. was set up in technical and allied industries. The of Czechoslovakia collaboration with M/s. Skoda Export of Czechoslovakia. The installed capacity of the plant approx. 23,000 toppo approx. 23,000 tonnes per year valued at about Rs. 14 crores.

BHPV has entered into a collaboration agreement M/s. Air Liquide of France, for the manufacture of air of gas separation plants and with M/s. Nooter Corporation The the USA for the manufacture of high pressure vessels. former will enable the Company to offer complete air and gas separation plants separation plants required by the process industry on the turnkey basis and the latter will provide the know-how for manufacture of high pressure multi-layer vessels required for ammonia manufacture multi-layer vessels required synthesis of high pressure multi-layer vessels required ducts. ammonia, urea, methanol and other organic pro-

The capital cost of the Project, as approved by Govern ment, is Rs. 20.12 crores, including Rs. 0.74 crores on account for descriptions. of interest capitalised during construction, and Rs. 2.78 crores expension of a towness. for development of a township. As against this, the capital specific specif expenditure incurred upto the end of December, 1971

Rs. 18.43 crores including Rs. 1.09 crores on the township. Government's financial contribution upto end of March, towards was Rs. 21.07 crores, of which Rs. 7 crores was towards equity and the balance Rs. 14.07 crores was advanced as loans. The proportion of equity relative to the loans will be revised and raised shortly in line with debt-equity ratio of 1:1.

A decision has recently been taken by Government to finance the entire township from equity. By the end of March, 1972 an expenditure of Rs. 1.18 crores will be incurred on the township. The equity of the Company will further be raised to this extent.

The gross production at the project increased from 548 tonnes valued at Rs. 37.39 lakhs in 1970-71 to about 2,500 tonnes valued at about Rs. 227 lakhs in 1971-72. The more important orders executed by the Company during the year Were the supply of Digesters and Pressure Vessels to Bharat Aluminium Company, and Heat Exchangers and Petroche-Vessels to Gujarat Aromatic Project of the Indian Petrochemical Company, and Heat Exchanges Petrochemical Company, The table below summarises the operatmical Corporation. ing results of the Company for the last three years:

_								
Years	Ou	ross put onnes	Gross output value (Rs. in crores)	oiotion.	(Rs. in crores)	しせり	Loss (—)	(Rs. in crores)
1969-70							0.27	0.5
10m	•	240	0.062	0.02			0.84	I.II
<sup>1</sup> 970-71	•	548	0.374	0.35			2.29	3•4
1 <sub>971-72</sub>	•	500	1.675	0.63	0.61			

The higher loss during 1971-72 as compared to the previous year is primarily attributable to the higher capital related characteristics. It should also related charges i.e. depreciation and interest. be stated that in 1970-71, a sum of Rs. 84.85 lakhs being the interest charges i.e. depreciation and interest. interest charges during construction were capitalised resulting in a reduction in the loss.

The production plan of the Company for 1972-73, visulizes a production target of 7,000 tonnes of completed equipment valued at Rs. 7 crores.

The total value of orders received by the Company upto March 31, 1971 was Rs. 5 crores. During April-December, 1971 it received orders of the value of Rs. 14 crores. These include orders for two Oxygen Plants from Bokaro Steel Plant at an estimated cost of Rs. 10 crores. The new Fertilizer and improve the order book position of the Company.

# TUNGABHADRA STEEL PRODUCTS LIMITED TUNGABHADRA DAM

Tungabhadra Steel Products Limited was established in April, 1960 as a joint venture of the Governments of Mysore and Andhra Pradesh, each holding a share capital of Rs. 25 lakhs, for the manufacture of hydraulic gates, hoists and penstocks for river valley projects. In February, 1967, the Government of India acquired a controlling interest in the company by investing Rs. 51 lakhs as share capital while the investment by the Governments of Andhra Pradesh and Mysore remained unchanged. There has been no further investment in the company either in the form of equity or loans.

As the present site, where the workshops of the company are located, offers no scope for expansion, it has been decided to shift the workshops to a new site where the company intends to expand its activities and diversify its production. this in view, the company has acquired 87 acres of land at a distance of about one mile from its existing workshops. The expansion scheme, estimated to cost Rs. 104 lakhs, contemblate plates setting up a new structural shop with an area of 6,000 so sq. metres (the present area of the structural shop is 3,350 sq. metres). The machinery in the present structural shop will be shifted to the structural shop at the new site and the other shops (machine shop, foundry etc.) will be shifted progressively to the new site. When the proposed expansion scheme is completed, it would be possible to increase production of hydraulic and other structurals by 2,000 tonnes per year. Additional machinery for diversification of production is also proposed to be installed during the current Plan period. It is expected that the shifting of the workshops and the expansion of the production facilities would be completed by the end of 1973.

The principal items of production are gates, hoists and penstocks for river valley projects and transmission towers, building structurals, pressure vessels, tanks, gantry cranes, and EOT cranes. The company has a collaboration agreement with M/s. Neyrpic. Grenoble, France for the manufacture of gates and other hydraulic structurals.

There has been a steady increase in the value of production during the years, and the largest during the current year, as shown below:—

Year	Quantity in	Value in
	tonnes	Rs. lakhs
1967-68	<del></del>	
1968-69	1,050	64.01
1969-70	2,305	72.50
1970-71	3,892	106.00
1971-72 (anticipated)	3,587	116.00
S.	4,393	144.30

Some of the more important projects that are under cution are gates and hoists for the Ukai projects in Gujarat, the Malaprabha project in Mysore, the Balimela project in Orissa Project in Mysore is expected to start shortly.

The net profits earned by the company before the payment income tax have been as under:

1967-68	• • •	
1968-69		(Rs in lakhs)
1969-70		15.58
1970-71	·	9.64
1971-72	• • • • • • • • • • • • • • • • • • •	4.49
		1.12
		- 2.1

The profits steadily declined from year to year but the trend has begun to be reversed from the current year.

The orders in hand as on 1st January, 1972 were of the value of Rs. 800 lakhs. The order for Narayanpur Dam is the biggest secured by the company so far. The order position for transmission line towers has been gradually improving and the value of orders in hand is Rs. 40 lakhs. An order for 1,700 tonnes (Rs. 30.77 lakhs) of transmission towers was secured from the Kerala State Electricity Board. The company has also quoted for major works for the Hemavathy Project and for the Mommanahalli Dam of Kalinadi Project in Mysore.

A scheme for construction of 200 tenements for workmen under the subsidised Industrial Housing Scheme of the Mysore State Housing Board has been taken up for execution. When the tenements are completed, the housing problems of employees will be mitigated to a considerable extent.

#### ENGINEERING PROJECTS (INDIA) LIMITED NEW DELHI

In April, 1970 a consortium of selected public sector undertakings was constituted with the intention of taking up business connected with the supply of equipment for steel plants, mines, fertilizer factories and other industrial projects by entering into contracts for design, manufacture, inspection, supply, erection and commissioning of equipment on a turn key basis or oherwise by utilizing the facilities available with the member companies.

The new company was incorporated under the name and style "The Indian Consortium of Industrial Projects Limited". Its name was subsequently changed to "Engineering Projects (India) Ltd."

The public undertakings which are participating in the share capital of the Consortium and the percentage of their share holdings are as under:—

	percent
(ii) Heavy Engineering Corporation Ltd., Ranchi.*	
(ii) Bharat Heavy Pro-	•
(ii) Bharat Heavy Electricals Ltd., New Delhi.	10
(iii) Heavy Electricals (India) Ltd., New Delhi. (iv) Mining & Allied March.	10
(iv) Mining & Allied Machinery Corpn. Ltd., Durgapore	7
(v) Bharat Heavy Plate & Vessels Ltd., Visakhapatnam.	ē. <b>*</b>
(vi) Triveni Structure : Vessels Ltd., Visakhapatnam,	.*
(vi) Triveni Structurals Ltd., Visakhapatnam. (vii) Instrumentation	1
(vii) Instrumentation Ltd., Kota	5
Steelworks Construction	3
(viii) Hindustan Steelworks Construction Ltd., Calcutta.*	

The initial authorised capital of the company is Rs. 30 lakhs and the initial subscribed capital Rs. 10 lakhs.

During 1970-71, which was the first year of its functioning, the company incurred a revenue expenditure of Rs. 2.45 lakhs. During 1971-72 it is expected that the excess of expenditure over income would be Rs. 7.62 lakhs. During 1972-73, according to present estimates, the income of the company should suffice to meet the revenue expenditure and also give a small surplus.

The company has already secured an order for the construction of Silos valued at Rs. 60 lakks for the Food Corporation of India. The work is under execution. The Company has also secured an order worth Rs. 20.20 lakks from NMDC for the Bailadilla Iron Ore Mines. A letter of intent has been received by the company recently for a contract of the total value of Rs. 12.20 crores for the approaches relating to Second Hooghly Bridge, Calcutta.

The company has so far submitted quotations of the value of Rs. 51.63 crores including the second Hooghly Bridge and the Kandla Fertilizer Handling Project. It is also processing some tenders submitted in the past by its member companies
